Preface

For details, see the following topics:

- [About this documentation](#)
- [Notation conventions](#)
- [Aurea global support](#)

About this documentation

This guide is part of the documentation set for Aurea CRM.

Notation conventions

This document uses the following notation conventions:

Convention	Meaning
Fixed-width	Fixed-width font indicates code, path names, file names, environment variable names, parameter names, command names, machine names, URLs.
Fixed-width	Fixed-width font is used to indicate user input or to emphasize certain lines of code.
<i>Fixed-width</i>	<i>Fixed-width</i> font indicates a placeholder for which you must supply a value.
Sans serif	sans serif typeface indicates the names of graphic user interface elements such as dialog boxes, buttons, and fields.
<i>serif</i>	In text, <i>serif</i> typeface indicates the first use of an important term. The term is defined in the glossary.
Underlined	Underlined text in command lines and parameter descriptions indicate that you only have to enter the underlined part of the command or parameter name. For example, if you use the <u>-LOGFILE</u> parameter in a command, you only need to enter <code>-LOGF</code> .
[]	Brackets enclose optional arguments.
{ a b c }	Braces enclose two or more items. You can specify only one of the enclosed items. Vertical bars represent OR separators. For example, you can specify a or b or c.

Convention	Meaning
...	Three consecutive periods indicate that you can repeat the immediately previous item. In code examples, they can be horizontal or vertical to indicate omissions.
Menu > Choice	An angle bracket between two menu items indicates that you should choose an item from a menu. For example, the notation File > > Exit means: "Open the File menu and choose Exit ."
>>	Links to related information in other chapters or documents are indicated using the >> symbol.

Aurea global support

If you encounter a problem while using an Aurea product or require assistance with downloading the software or upgrading a product release, please open a ticket on [Aurea Support Central](#). Preferably, search the articles on the [Aurea Knowledge Base](#) for solutions to your issues before opening a ticket.

Information about the support organization is available on Support Central. The product documentation is available at <https://help.aurea.com/crm/#>.

For information about purchasing an upgrade or professional services, contact your account executive. If you do not know who your account executive is, or for other queries, [contact us](#) through our [website](#).

1

Supported Versions

Find the supported version for using industry solution templates.

To use the ISI, LSI or FSI Template V5, the following product versions or higher are required:

- **Aurea CRM win Version**
9.1.1.16 – BTB, OTC, FS
- **Aurea CRM web Version**
9.1.1.16 – BTB, OTC, FS
- **Aurea CRM cockpit Version**
9.1.1.16 – BTB, OTC, FS
- **Aurea CRM Template**
 - ISI Cockpit Package: TE_ISI_9.1.1.16.zip
 - LSI Cockpit Package: TE_LSI_9.1.1.16.zip
 - FSI Cockpit Package: TE_FSI_9.1.1.16.zip

Note: The template package required for installation or upgrade is found inside the above packages. Ensure that you unzip the above zip files and use the TE_<VERTICAL>_package_<Version>.zip when importing the package. For example, for the FSI vertical, the template package to import is “TE_FSI_package_9.1.1.16.zip” and can be found when you unzip “TE_FSI_9.1.1.16.zip”.

Basic Installation of Aurea CRM win/web

Pre-requisite for importing a template package.

The basic installation of Aurea CRM win and web needs to be done before you can import a Template package. Please refer to these installation guides on how to do this:

- [Aurea CRM win Installation Guide](#)
- [Aurea CRM web Installation Guide](#)

2

Install or Import the Template

Here you can learn how to install the product, upgrade the template and troubleshoot issues.

The template cockpit package includes the additional files (e.g. Jscript, XSLT etc.) compared to a standard web installation.

The topics are with the following abbreviations to give you a better overview:

- BS: Business Solutions
- OP: Operations

The Template package does not contain records in the text table (04) to improve the speed during the import of the cockpit packet. All translated template texts are saved in the data model. For information on how to translate your texts please follow the instructions in the customization guidelines.

Prerequisites (OP)

Basic win and web installation is done and running.

Important: Please make sure that you turned off all IIS application pools and services (CRM.server, Connector, etc.), associated with the application you want to upgrade.

Included Products

Here you can find a list of the included products for industry solution.

The Template packages can be used for both initial and upgrade installations. The following products are included in the Template packages for your vertical:

Product	ISI	LSI/CG	FSI
Web	X	X	X
CRM.pad / Mobile	X	X	
Web offline	X	X	
Connector SE for Exchange	X	X	X

Product	ISI	LSI/CG	FSI
ConnectLive	X	X	
Connector for Domino			X

Import Template with cockpit (OP, BS: Info about Reps)

Learn how to install updated datamodel templates.

The station which you want to import needs to be configured as “Main Office” and “Aut.Cat.Maintenance”.

Stat.No. 9001	Stat. Name CU_DEV
Main Office <input checked="" type="checkbox"/>	Aut.Cat.Maintenance <input checked="" type="checkbox"/>

1. Start Aurea CRM cockpit, make sure to login in “**English**” if you have already configured other languages. You should be prompted with the following dialog:

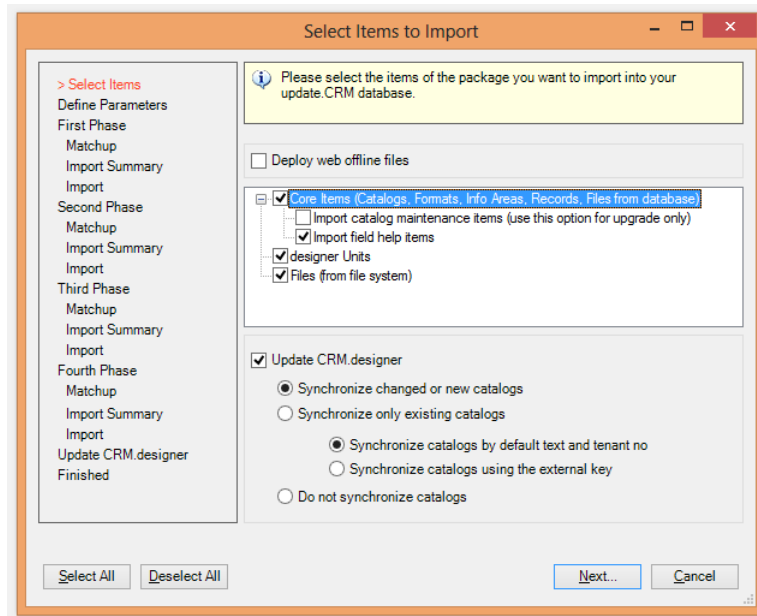

2. Select “Use existing import file”.

Note: The template package required for installation or upgrade is found inside the TE_<VERTICAL>_<Version>.zip. Ensure that you unzip the above zip files and select the TE_<VERTICAL>_package_<Version>.zip package to import.

3. Select the Template Package and continue. You are prompted with the following dialog, click “OK”:

4. Configure the next settings dialog as per the below screenshot. Do not check 'Import catalog maintenance items'.

The 'Aurea CRM.designer' option uses the same functionality as the bulkloader. By enabling this option cockpit automatically updates the CRM.designer database with the current datamodel, catalogs, CRM processes (R4) and roles (R2).

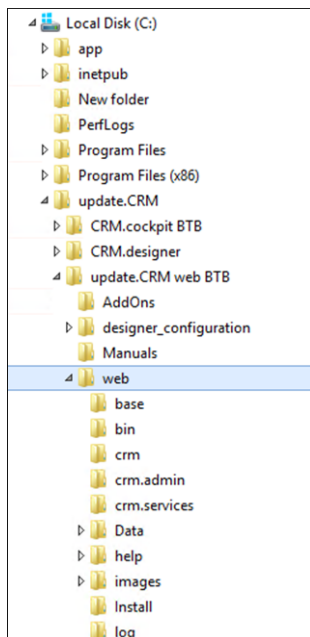

You can also choose the catalogs you want to synchronize (new or changed catalogs), only those catalogs can be synced that are already in the designer. So you can choose if you want cockpit to do it, or manually do it later using CRM.bulkloader.

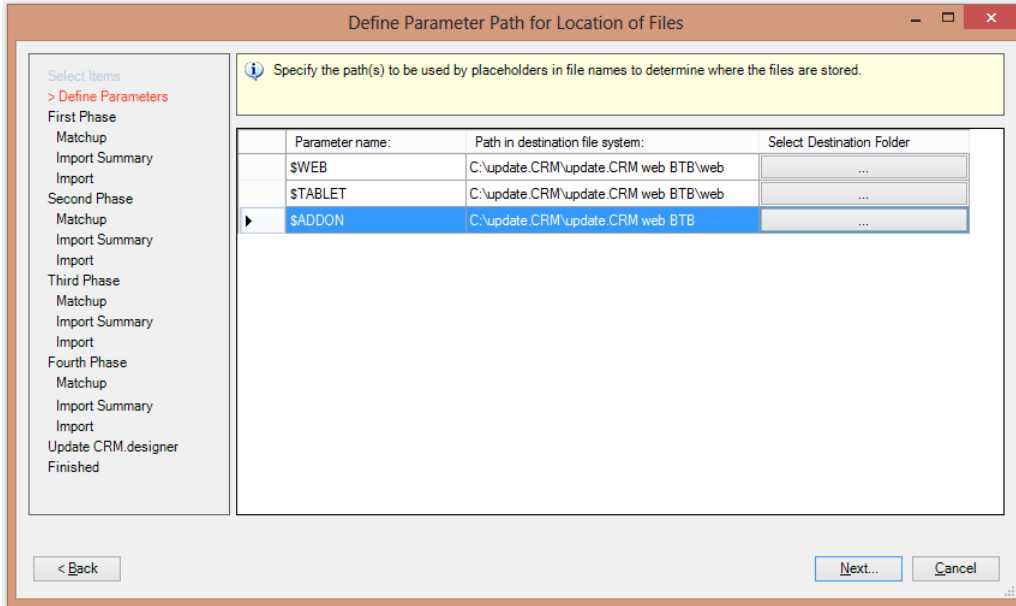

Now you need to select the appropriate destinations for the following parameter paths. (These parameters contain files which are required by the template).

Note: The `$WEB` parameter is mandatory. However, you can omit the `$TABLET` and `$ADDON` parameter, if you don't want to use these products. You can later import the cockpit package again and only import the missing parameters if you need these files (make sure to only check the box **Files (from file system)** in the previous step).

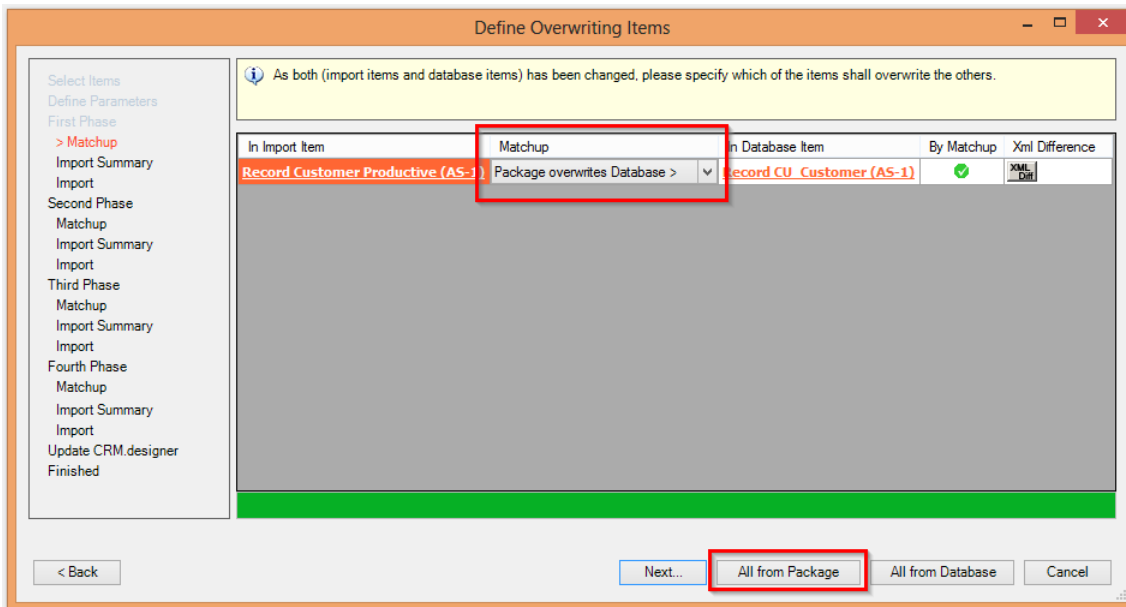

- `$WEB`: This parameter contains all Template files which are needed for update.CRM. Use the web folder inside your installation directory, e.g. `C:\update.CRM\update.CRM web BTB\web`.
- `$TABLET`: This parameter contains the tablet resources (images) which are required for CRM.pad. The files is extracted to the default tabletResources folder. Therefore, select the same folder as used for the `$WEB` parameter.
- `$ADDON`: This parameter contains all settings files which are needed for several add-on products, such as interface or connector. You can place these wherever you want, you need to copy and edit these files before you use them with the product. E.g. select your installation directory, `C:\update.CRM\update.CRM web BTB`.

If the button with the three dots is not visible, use the scrollbar at the bottom of the window to scroll to the right or make the window bigger in the bottom right corner. You can also paste your destination path into the second column.

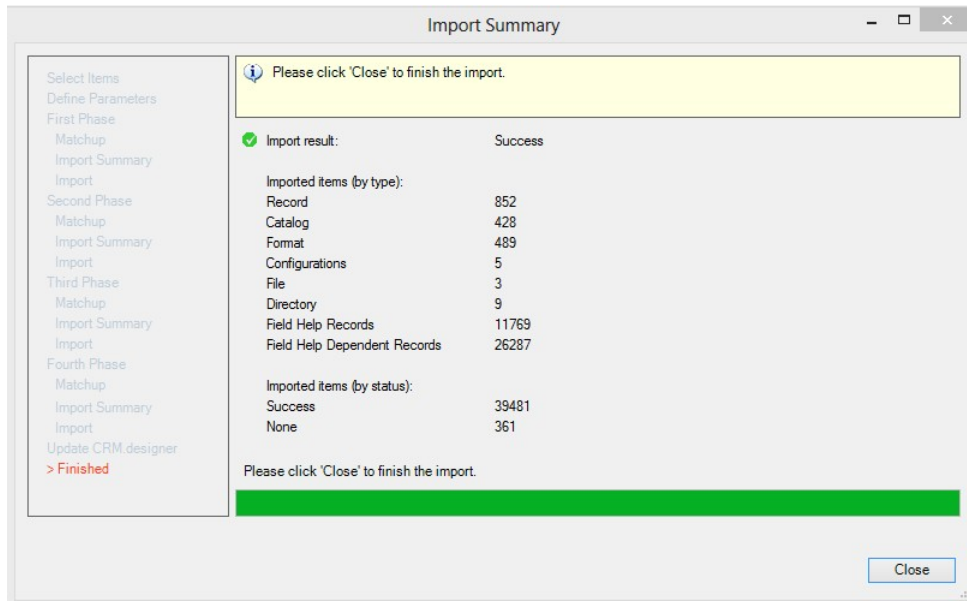

Now the matchup starts. You should always click “All from Package” if you are importing a Template. Subsequently, click on “Next”. This matchup could start two more times depending on what you configured before. Be sure to select “All from Package” every time the matchup is started.

You now see an import summary. The template is imported after you click on “Start writing to Database”.

The matchup now starts once again, be sure to check “All from Package”! It is also possible that an empty matchup window is opened and closed after a few seconds without user interaction. This is intentional as the matchup did not find any items which were altered in this phase.

When the import is finished you should get a success message.

Included Reps and Stations

Here you can find the industry specific list of reps.

The package for ISI includes the following reps:

[HTTPUSER \(ID-1000100097\)](#)
[IMPORTuser \(ID-1000100045\)](#)
[INTERFACE \(ID-1000100103\)](#)
[Lotus Notes Connector User \(ID-1000100220\)](#)
[Service User \(for Exchange Connector\) \(ID-1000100081\)](#)
[SU \(ID-1000100330\)](#)
[SU0001 \(ID-1000100001\)](#)
[u8server \(ID-1000100501\)](#)
[WWW User \(ID-1000100331\)](#)

The package for LSI includes the following reps:

[Arno Admin \(0001\) \(ID-1000200186\)](#)
[Arno Admin \(SU\) \(ID-000000001\)](#)
[Arno Catalogue \(0001\) \(ID-1000200066\)](#)
[Arno Catalogue \(9001\) \(ID-1000200067\)](#)
[Arno Catalogue \(9002\) \(ID-1000200090\)](#)
[COM \(ID-000000002\)](#)
[crmServer \(1\) \(ID-1000200018\)](#)
[crmServer \(9100\) \(ID-1000200007\)](#)
[crmServer \(9101\) \(ID-1000200017\)](#)
[crmServer \(9200\) \(ID-1000200144\)](#)
[crmServer \(9201\) \(ID-1000200147\)](#)
[HTTPUSER \(ID-000000004\)](#)
[NCSU \(ID-1000200086\)](#)
[OCSU \(ID-1000200085\)](#)
[WWW \(ID-000000003\)](#)

The package for FSI includes the following reps:

[Admin, Arno \(ID-1000300002\)](#)
[Administration \(ID-1000300016\)](#)
[COCKPIT \(ID-1000300934\)](#)
[COM \(ID-1000300899\)](#)
[OCSU \(ID-1000300967\)](#)
[Service User \(for Exchange Connector\) \(ID-1000300966\)](#)
[SU1 \(ID-1000300550\)](#)
[U8Server\(1\) \(ID-1000300978\)](#)
[U8SERVER\(9100\) \(ID-1000300968\)](#)
[WWW \(ID-1000300001\)](#)

Please make sure to change your passwords after you logged in as SU user!

Included Designer Configurations

This topic lists the designer configurations included in the Cockpit package.

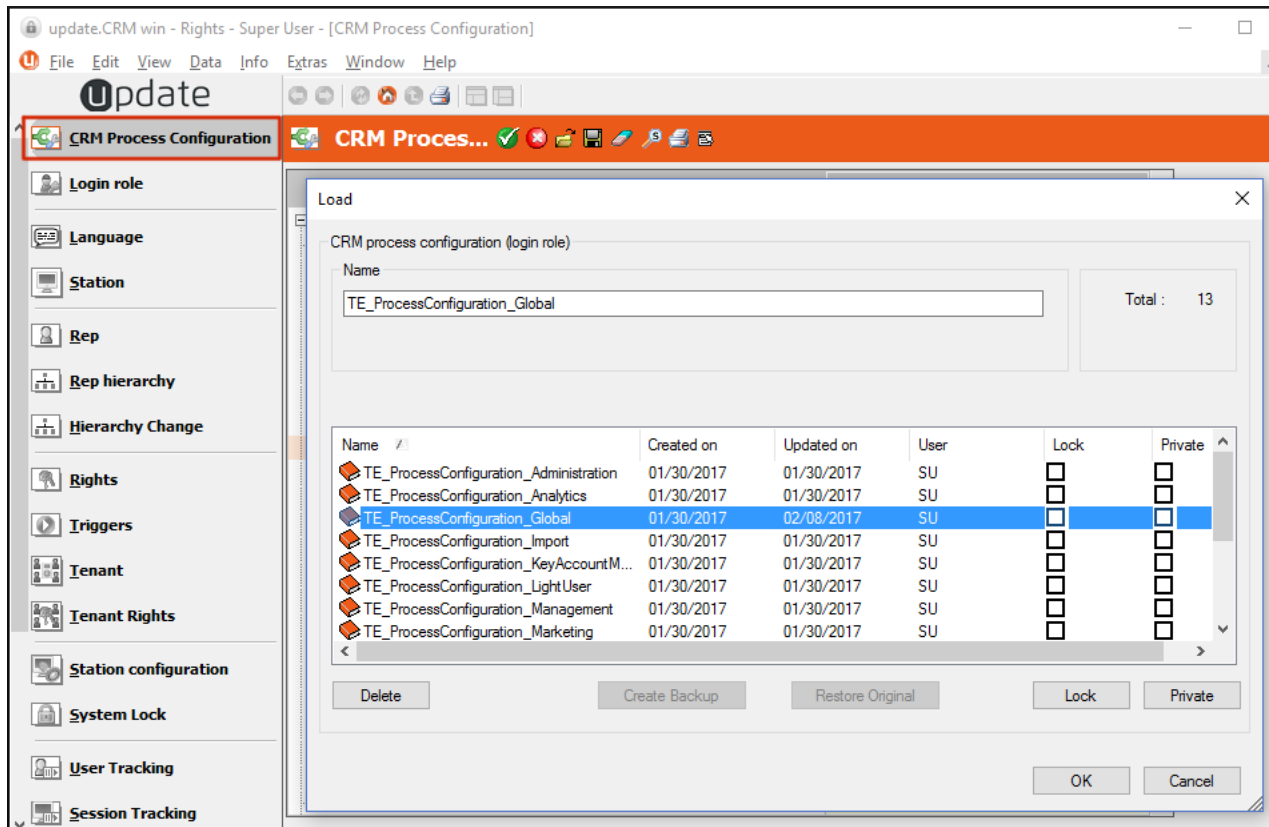

The following table shows the Designer Configurations that are included in the Cockpit Package:

ISI web	TE_CORE TE_ISI CU_Customer
ISI CRMpad	TE_ISI_TABLET CU_ISI_TABLET
LSI/CG web	TE_CORE TE_LSI XX_LSI_Country_Customer TE_LSI_Marketing TE_LSI_RxSales TE_LSI_KeyAccountManagement TE_LSI_Base TE_ LSI_Management TE_LSI_Service TE_LSI_OTCSALES TE_CONSUMERGOODS
LSI/CG CRMpad	TE_LSI_tablet TE_CG_tablet
FSI web	TE_CORE TE_FSI

Aurea CRM win – CRM Process Configuration (BS)

Note: This step is only necessary for ISI and FSI business solutions. LSI is using B4 records to control the CRM process configuration.

To ensure that the correct process configuration is loaded please go into the Rights module and load the “TE_ProcessConfiguration_Global” process configuration.

Aurea CRM win – Configuration (MC) (BS)

The configuration records are delivered without a station number.

LSI&CG

The following records are delivered without a station number and can be considered as an example configurations. They have an effect on your customer’s station. Changes to these records are not overwritten by a template upgrade.

Category	Option	ID
Data Model	Reference Text	(MC-10002-10)
General Settings	Connection Settings for SMTP	(MC-10002-25)

Category	Option	ID
General Settings	E-mail Client	(MC-10002-8)
General Settings	Title bar	(MC-10002-18)
Geo-coordinates	Active in the following modules	(MC-10002-56)
Geo-coordinates	Geolocation handler	(MC-10002-34)
Geo-coordinates	Geolocation handler	(MC-10002-35)
Geo-coordinates	Geolocation handler	(MC-10002-37)
Geo-coordinates	Geolocation handler	(MC-10002-38)
Geo-coordinates	Geolocation handler	(MC-10002-40)
Geo-coordinates	Geolocation handler	(MC-10002-41)
Geo-coordinates	Geolocation handler	(MC-10002-46)
Geo-coordinates	Geolocation handler	(MC-10002-47)
Listing	Inheritance - Serial Input	(MC-10002-23)
Listing	Inheritance	(MC-10002-22)
Triggers	Log triggers	(MC-10002-3)
Word processor	Document Types	(MC-10002-16)
Workflow	Log workflows	(MC-10002-9)

Calendar >> Holidays

There are no MC-records delivered with Category: Calendar and Option: Holidays in the LSI & CG Business solution.

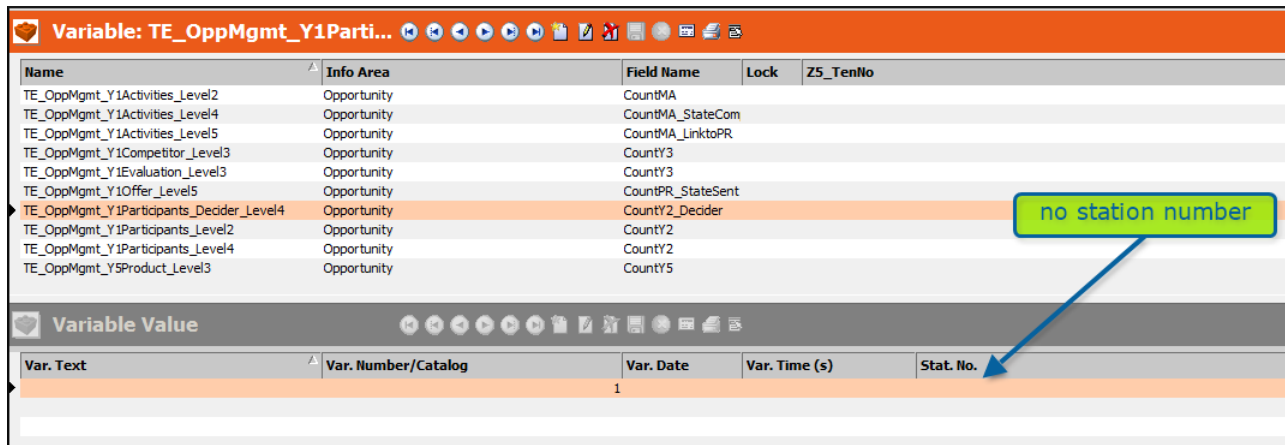

The XML files containing the default calendar definitions are located at `..\system\xml\Calendars`. For more information please look at the CRM.core Administrator Guide.

update.CRM win – Variables (Z5/Z6) (BS)

Aurea CRM win – Variables (Z5/Z6) (BS)

Variables are used to configure different parts of the template.

The values of the variables are delivered without a station number!

Therefore all values are valid for all stations!

There are two possibilities to define project-specific variable values:

- Change the variable value which is delivered by the template – the record is not updated with the next upgrade.
- Create a new variable value for your station number.

Please also define the correct tenant.

Corporate Currency variable

The corporate currency feature is activated and has some default values out-of-the-box.

The screenshot displays two panels in the Aurea Designer interface. The top panel, titled 'Variable: upd...', shows the configuration for a variable named 'update_CorporateCurrency'. The fields are as follows:

Name	update_CorporateCurrency
Description	
Info Area	Exchange Rate
Field Name	Currency
Type	
Lock	<input type="checkbox"/>

The bottom panel, titled 'Variable Value', shows a table of values for various variables. The 'Var. Number/Catalog' field is highlighted with a yellow background and contains the value '2'. The 'Var. Text' field contains the value 'EUR'.

Z6_TenNo	
Stat. No.	
Rep Group ID	
Rep ID	
Language No.	
Login role	
Country	
Condition for info area	
Default	<input type="checkbox"/>
Var. Text	
Var. Number/Catalog	2
Var. Rep ID	
Var. Date	
Var. Time (s)	
Var. Decimal	
Var. Logical	<input type="checkbox"/>
Link	

Whether you want to use this feature or not should be defined in the beginning of a project. For more information please check out the template's technical documentation.

Aurea CRM win – Language Configuration (only Necessary for LSI&CG) (BS)

After the installation is complete the parent language for CU is empty. You have to configure the CU_languages for your project. Dependent on LSI or CG you have to configure different parent languages. For LSI projects you need languages based on 100. For CG projects you need languages based on 200.

Language	Lang.(Text)	Lang.(Cat.)	Lang. (update)	Catalog Lang	Catalog Base Lang	Parent Language No.	Parent Language
1	TE_BASE		Y	Y			
2	TE_Docu		N	N

Aurea CRM win – Tenant Configuration (BS)

The template includes tenant 1 as a sample value for your customer. Tenant 1 has tenant 9000 as additional tenant. In LSI and FSI projects it is enough if you can see the template tenant 9000 in addition.

In LSI & CG projects you have to add tenant 9004 or 9005 depending on whether you are using an LSI or CG project.

Example LSI Project

Add additional tenant 9004 for LSI projects.

Tenant No	Tenant Name	* Tenant Rights	Text
▶ 1	Customer	TE_TR_Template Main - LSI	sample value for customers
9000	TEMPLATE MAIN - LSI&CG	TE_TR_Template Main - LSI	TEMPLATE MAIN data for LSI and CG (catalog values, data used in template, can be seen
9002	TEMPLATE - OneKey - LSI	TE_TR_Template Main - LSI	TEMPLATE: One-Key pool interface. Used as additional tenant
9004	TEMPLATE MAIN - LSI	TE_TR_Template Main - LSI	TEMPLATE MAIN data for LSI (catalog values, data used in template - RELEASED!)
9005	TEMPLATE MAIN - CG	TE_TR_Template Main - LSI	TEMPLATE MAIN data for CG (catalog values, data used in template - RELEASED!)

M2_TenNo	Add.Tenant Name
9000	TEMPLATE MAIN - LSI&CG
▶ 9004	TEMPLATE MAIN - LSI

Example CG Project

Add additional tenant 9005 for CG projects.

Tenant no	Tenant Name	Tenant Rights	Text
1	Customer	TE_TR_Template Main - LSI	sample value for customers
9000	TEMPLATE MAIN - LSI&CG	TE_TR_Template Main - LSI	TEMPLATE MAIN data for LSI and CG (catalog values, data used in template, can be
9002	TEMPLATE - OneKey - LSI	TE_TR_Template Main - LSI	TEMPLATE: One-Key pool interface. Used as additional tenant
9004	TEMPLATE MAIN - LSI	TE_TR_Template Main - LSI	TEMPLATE MAIN data for LSI (catalog values, data used in template - RELEASED!)
9005	TEMPLATE MAIN - CG	TE_TR_Template Main - LSI	TEMPLATE MAIN data for CG (catalog values, data used in template - RELEASED!)

M2_TenNo	Add.Tenant Name
9000	TEMPLATE MAIN - LSI&CG
9005	TEMPLATE MAIN - CG

Aurea CRM web – settings.xml (OP)

In the web package you find a sample file `settings_Example.xml` which includes all necessary template changes.

Please replace your `settings.xml` with the provided `settings_Example.xml` which is located in

...\\web\\system\\settings. Also ensure that you provide the correct connection string in your new `settings.xml`.

The `template.dll` file has been added as a plugin in ISI, LSI and FSI:

```

<!-- Template Plugins -->
<Plugin type="update.Template.Isi.Plugin, update.Template.Isi" />
</Plugin>
</update.server>

```

Virtual TFI1, TPR1, TPR2 and TPR3 info areas have been added in the ISI `settings.xml`:

```

<VirtualSchema>
  <!-- ISI-TEMPLATE Virtual Infoareas must start with "T..." ! -->
  <!-- Company Competitor FI -->
  <InfoArea infoAreaId='TFI1' physicalInfoAreaId='FI' name='Competitor' fieldId='167'
    fieldType='K' value='Competitor (BASE)' tenantNo='9000' />

  <!-- Offer Types PR -->
  <InfoArea infoAreaId='TPR1' physicalInfoAreaId='PR' name='Service Contract Offer'
    fieldId='5029' fieldType='K' value='Service Contract Offer (BASE)' tenantNo='9000' />
  <InfoArea infoAreaId='TPR2' physicalInfoAreaId='PR' name='Service Offer'
    fieldId='5029' fieldType='K' value='Service Offer (BASE)' tenantNo='9000' />
  <InfoArea infoAreaId='TPR3' physicalInfoAreaId='PR' name='Service Report'
    fieldId='5029' fieldType='K' value='Service Report (BASE)' tenantNo='9000' />

  <!-- CUSTOMER Virtual Infoareas must start with "V..." as described in the infoletter
  -->
  <!-- DEFINE your customer virtual infoareas here: e.g.: <InfoArea infoAreaId='V...'
    physicalInfoAreaId='' name='' fieldId='' fieldType='' value='' tenantNo='' /> -->
</VirtualSchema>

```

Aurea CRM web – web.config (OP)

- The file ...\\web\\web_Example.config includes all necessary changes for the ISI template.
- Rename file ...\\web\\web_Example.config to web.config.

The te.bin folder has been added:

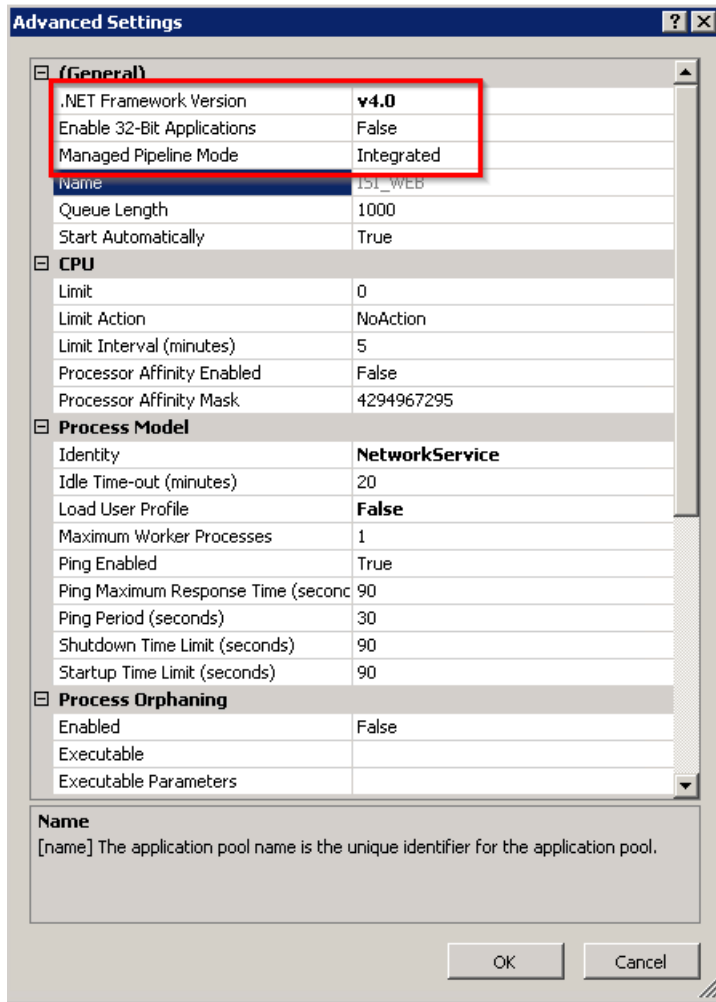

```
8  <runtime>
9  <assemblyBinding xmlns="urn:schemas-microsoft-com:asm.v1">
10 <probing privatePath="bin;te.bin;system"/>
11 </assemblyBinding>
12 </runtime>
```

Aurea CRM web – custom-color.css (BS, OP: deploying the file)

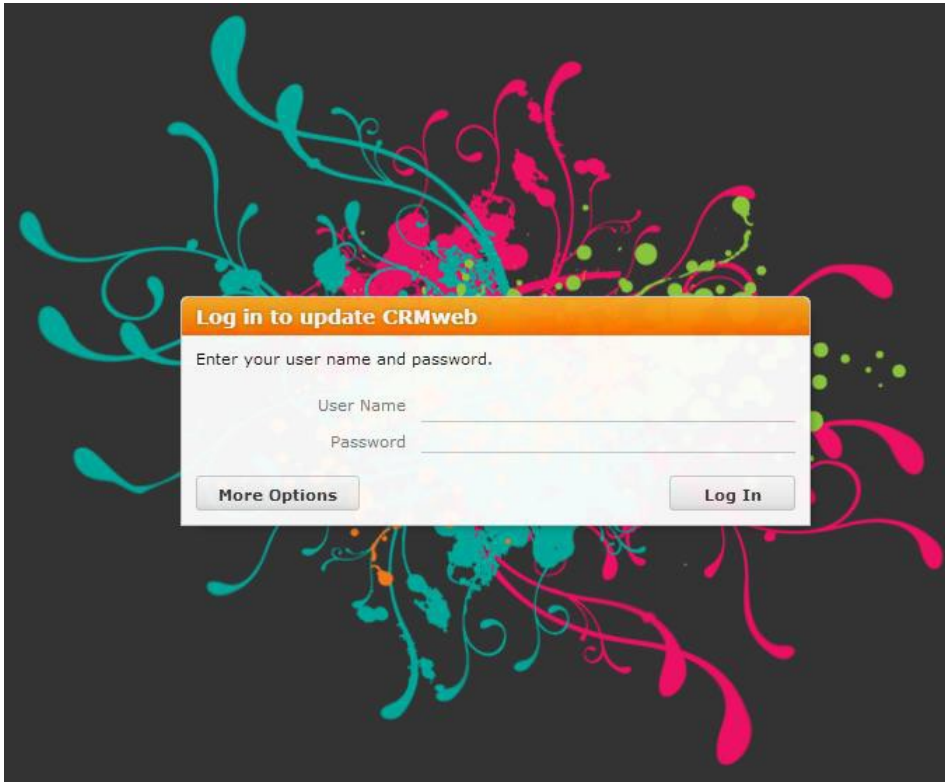

- With the file ...\\web\\styles\\te.base\\custom-color_Example.css you can use your own color scheme for update.CRM web.
- Rename the file ...\\web\\styles\\te.base\\custom-color_Example.css to custom-color.css.

Aurea CRM web – Application Pool Settings (OP)

Please be sure to configure your application pool like the following screenshot:

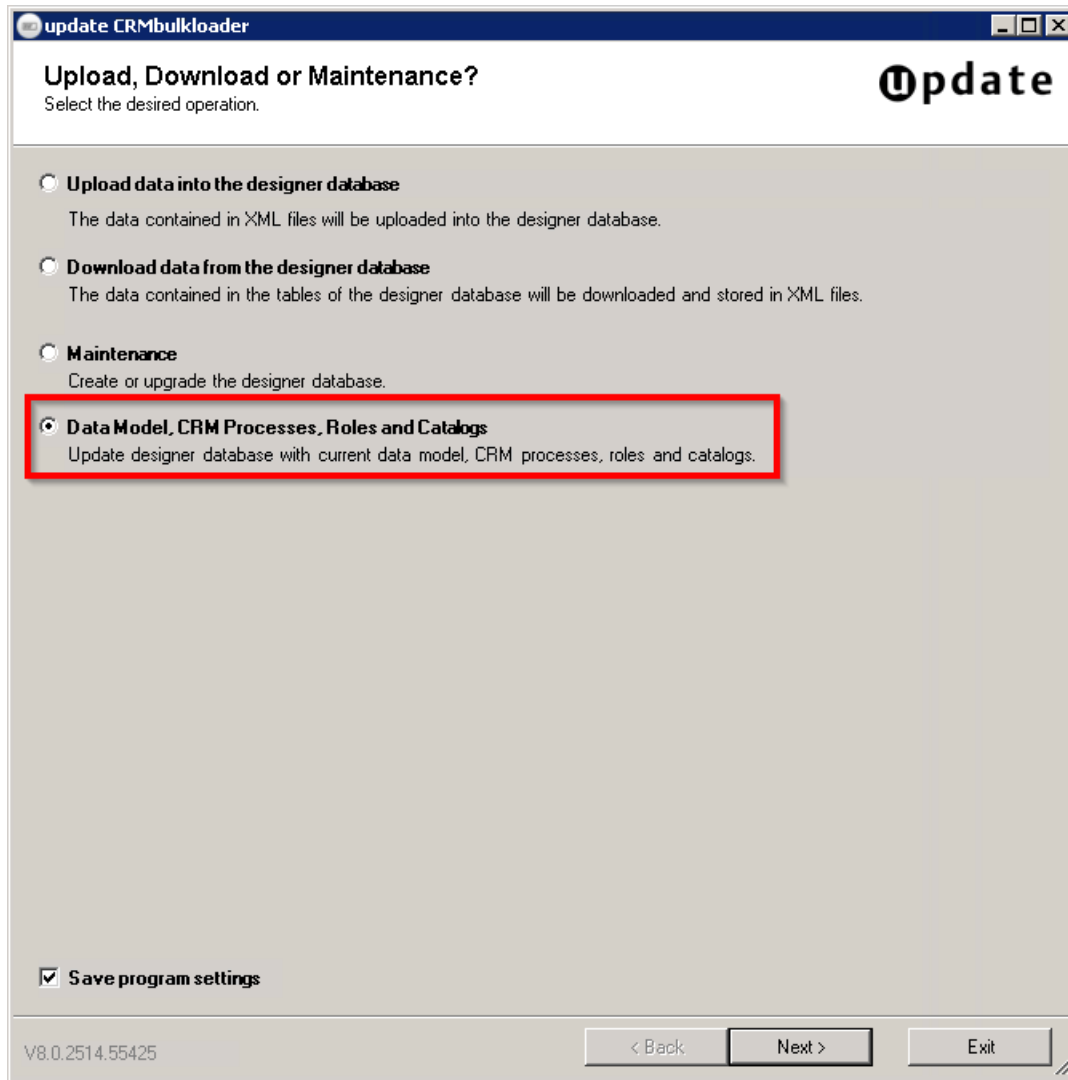

Now start the web. You should see the login screen for the user:

Aurea CRM designer (OP)

To synchronize the designer datamodel with the current CRM.core datamodel please start the update.CRM bulkloader located in ...\\update crm web\\designer\\database.

Please provide your SU user credentials and the address to your web service. In case you are using RAS, please provide your RAS login credentials. The language you select here is the language that the fields are displayed in the designer, e.g. if you select **eng**, then the fields in the Designer is displayed in English:

update CRMbulkloader

update CRM Login
Login to update CRM

update

Login

User name: su Single Sign-In

Password:

Language: eng

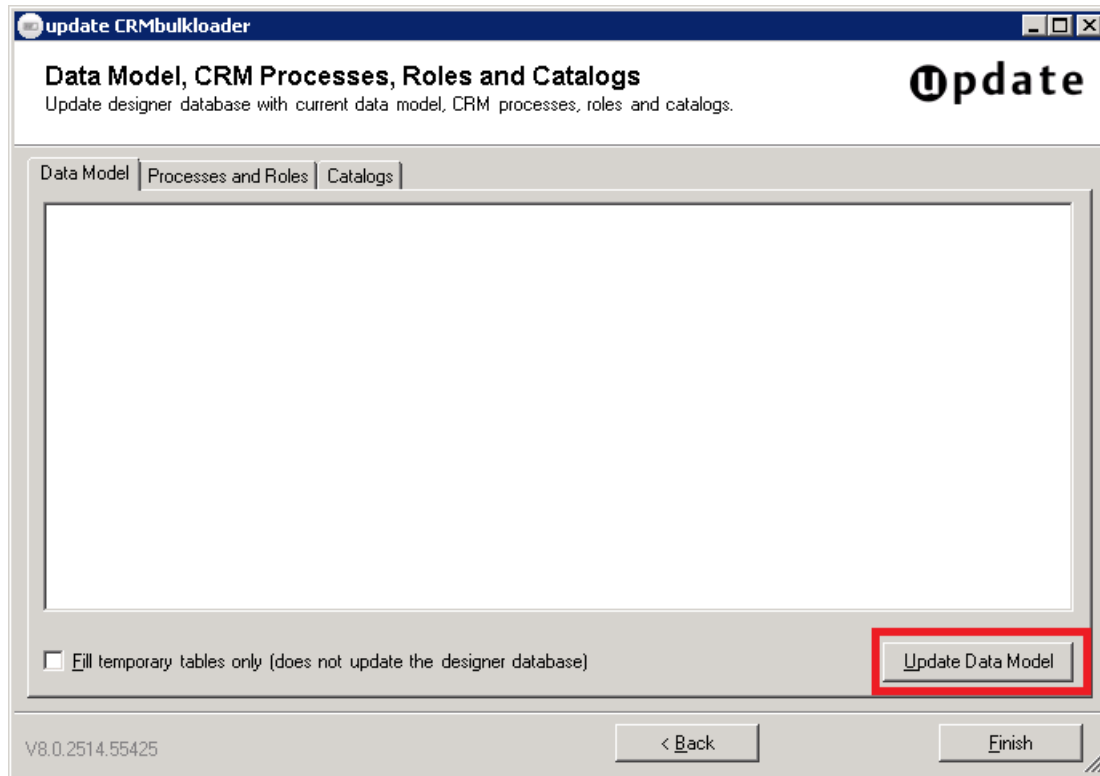

update CRMdesigner Web Service URL:
http://localhost/<web>/crm.services/

Test

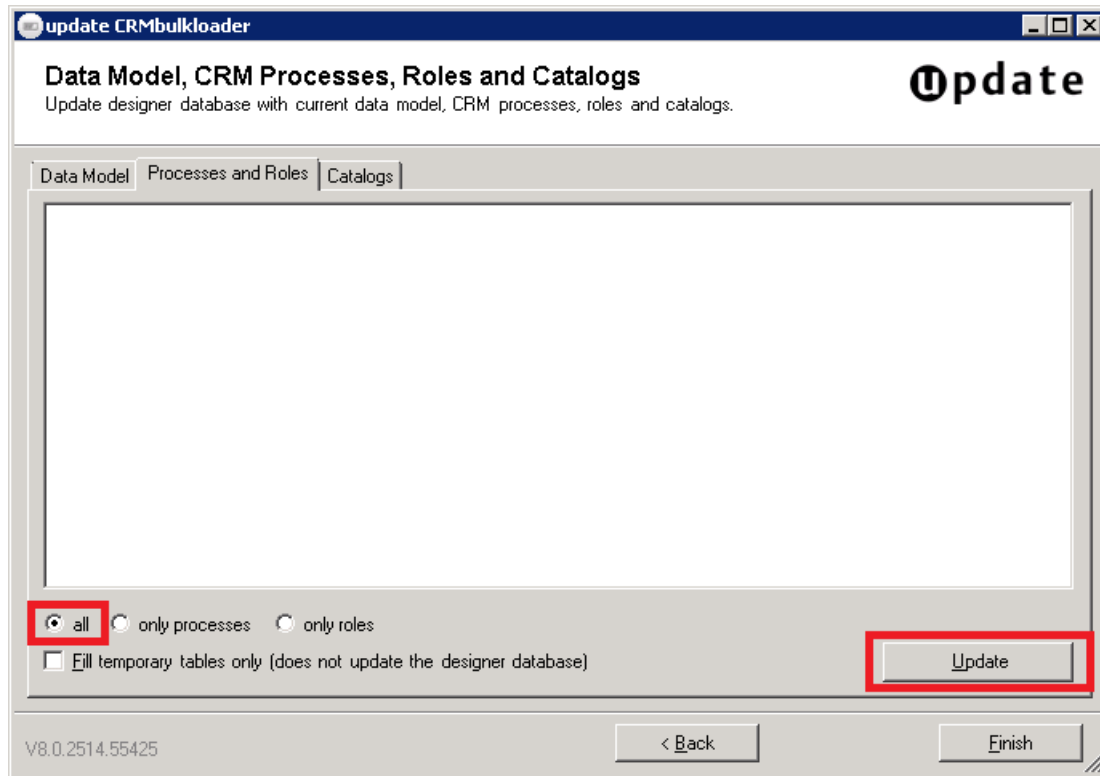

V8.0.2514.55425

< Back Next > Exit

1. Click **Next**. The **Data Model, CRM Processes, Roles, and Catalogs** dialog displays.

2. Select the **Data Model** tab and click **Update Data Model**.
3. Select the **Processes and Roles** tab. Check all radio buttons.

4. Click **Update**.

Aurea CRM designer – Languages (BS)

As the CRM sub-language is not transported with the cockpit package and is filled with '0', please insert the corresponding CU language which is used in the CRM sub-language as shown below.

- **ISI:**

Global Language Settings					
Startpage > Language Settings

Congratulations, you have successfully installed the template!

Aurea CRM designer – Customer Configurations (BS)

Starting from version 6 of the template, we are not delivering the customer configurations anymore. Please make sure that you create these configurations and customize them. The configurations for the respective verticals should be named as listed below:

ISI:

- CU_Customer (child of TE_ISI)
- CU_ISI_TABLET (child of TE_ISI_TABLET)

FSI:

- CU_Customer (child of TE_FSI)

→ Congratulations, you have successfully installed the template!

Additional Installations

Learn about the additional configuration for CRM.pad.

CRM.pad Installation

CRM.pad template configurations are only available for the ISI and LSI template, see [Supported Versions](#) on page 7 section to find the template version you need. All necessary configurations are imported, when you import the most recent template package. The following configurations are included:

- ISI template:
 - TE_ISI_TABLET
- LSI template
 - TE_LSI_TABLE
 - TE_CG_TABLET

Please make sure that a current update.tablet configuration is imported in your designer. The ISI template CRM.pad is available in these languages:

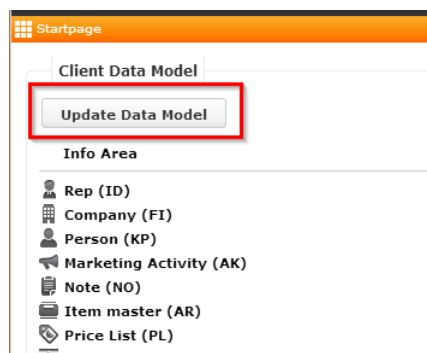

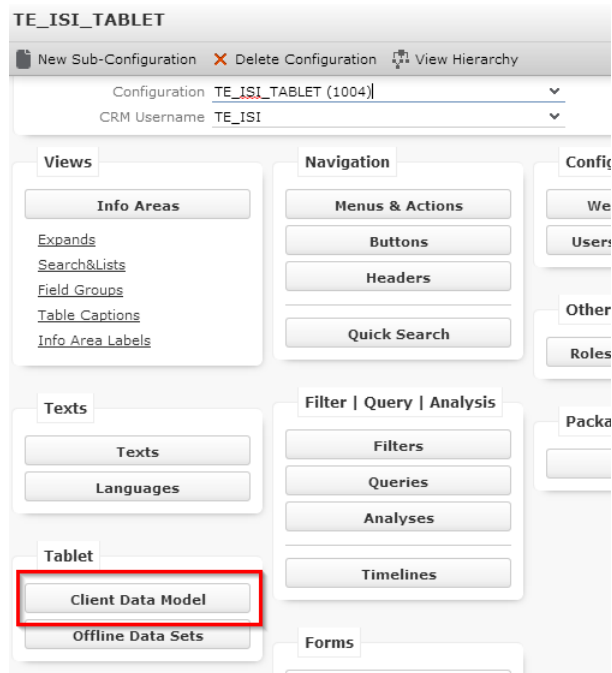

- English
- German
- Dutch
- French
- Polish
- Chinese

The LSI template CRM.pad is available in these languages:

- English
- German
- Dutch
- French
- Chinese

Please make sure that your desired languages are set to active in designer.

To complete the template installation of the CRM.pad please go to designer, select 'Client Data Model' and update the data model:

Please also have a look at the offline datasets to make sure that everything that you need is correctly synchronized! If you follow the installation guide for a [Template Upgrade](#) on page 39, the template CRM.pad configuration is also updated.

Installation and Upgrade information for LSI CRM.pad version 5 (BS)

Please change the tenant for 2 LSI-Template Configuration records. The records with Config. Category: "XML-Report (BASE)" and Config. Option: "Customer Report (BASE)" and Text 1: SHOW_SIGNATURE have to be set to tenant 9000 manually.

Those configuration records with the correct tenant are needed for the feature "Signature Box in CRM.pad reports". Otherwise you cannot see this feature.

Before:

U012-TenNo	Country	Config. category	Config. option	Active	Description	Logi	Text 1	Identifier
9050	Germany (BASE)	XML-Report (BASE)	Customer Report (BASE)	✓			SHOW_SIGNATURE	ORDERPREVIEW
9050	Germany (BASE)	XML-Report (BASE)	Customer Report (BASE)	✓			SHOW_SIGNATURE	SAMPLEPREVIEW

After:

U012-TenNo	Country	Config. category	Config. option	Active	Description	Logi	Text 1	Identifier
9000	Germany (BASE)	XML-Report (BASE)	Customer Report (BASE)	✓			SHOW_SIGNATURE	ORDERPREVIEW
9000	Germany (BASE)	XML-Report (BASE)	Customer Report (BASE)	✓			SHOW_SIGNATURE	SAMPLEPREVIEW

Addon Products (connectLive, Exchange connector SE, interface) (OP)

All settings files for addon products are delivered with the template package. You can find settings and example files for those products in the `te.addon` folder of your template. If you followed this installation guide you can find this folder in your web installation folder: `C:\update.CRM\update.CRM web BTB`.

CRM.server (BS: rep and settings, OP: create service)

Create a rep for the update.CRM server or use the deliver rep 'u8server'. The rep must have login rights for "server":

The rep must have the correct role to be able to create eg. MA, AF. Now you need to enter your server user's credentials in the `users.xml`: `.. \web\system\settings\users.xml`.

```
</User>
<User type="Server">
  <Name>U8SERVER</Name>
  <Password></Password>
</User>
</Users>
```

Now register the service on the application server using the `update.Server.exe` in the `... \web\bin` folder.

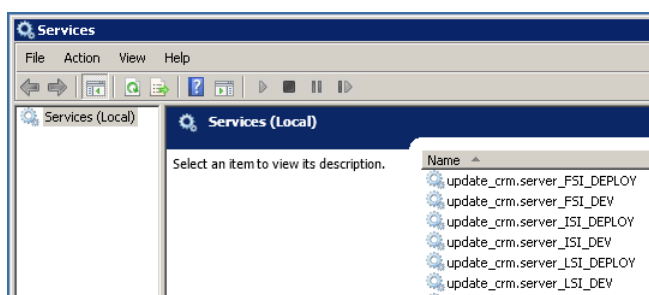

```
... \web\bin\ update.Server.exe --install --name "<SERVICENAME>
```

To remove a service enter the following command:

```
...\web\bin\update.Server.exe --uninstall --name "<SERVICENAME>"
```

See the started service in the list.

For more information, see [Aurea CRM.core Administrator Guide](#).

Template User Guide (BS)

There is an additional template-specific user guide available.

Please visit <https://support.aurea.com> for an up-to-date package.

Download the 'Online Help' for your template and copy it into the folder
 ... \web\web\help and overwrite all files.

Template Upgrade

Learn about the prerequisites for template upgrade and other upgrade information.

Prerequisites (OP)

The template upgrade follows the same steps as the initial import.

Note: Please make sure that you turned off all IIS application pools and services (CRM.server, Connector) associated with the application you want to upgrade.

Important: Upgrade with an Installed Hotfix (OP)

In case you have installed these hotfix versions:

- TE ISI Release 8.1.2.172 Hotfix
- TE LSI Release 8.1.2.209 Hotfix

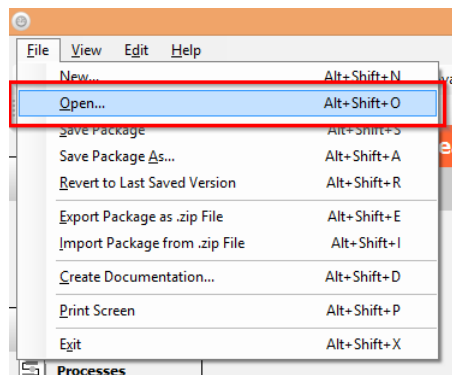

You have to delete the following catalog maintenance record (KW) manually in your database.

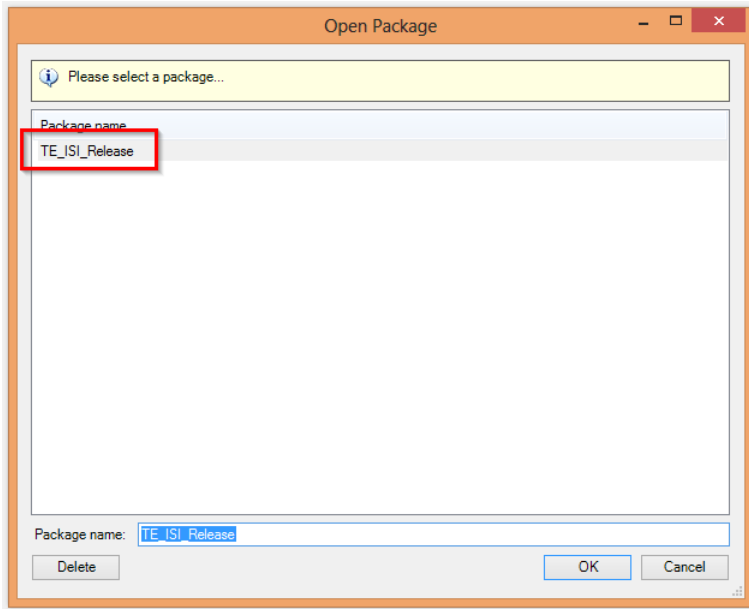

- LSI: External Key (field.id 22) is: 42958262947270 AND Modification (field.id 3) == empty
 - ISI: External Key (field.id 22) is: 42953967931787 AND Modification (field.id 3) == empty
-

Note: The hotfix version was imported by cockpit with importing the catalog maintenance records. This maintenance included a dummy record with the highest external key. This behavior is already fixed in newer cockpit versions. That's why it only occurred in the hotfix versions.

Cockpit Import (OP)

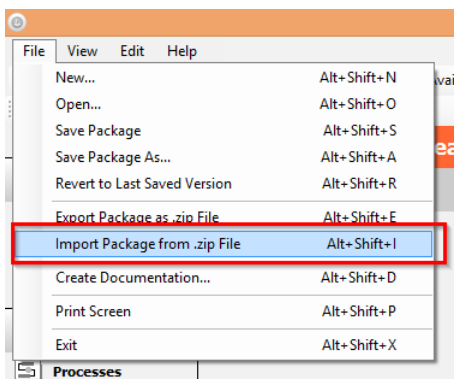

Be sure to open the TE_<vertical>_Release package in cockpit.

Now select “Import Package from .zip File”.

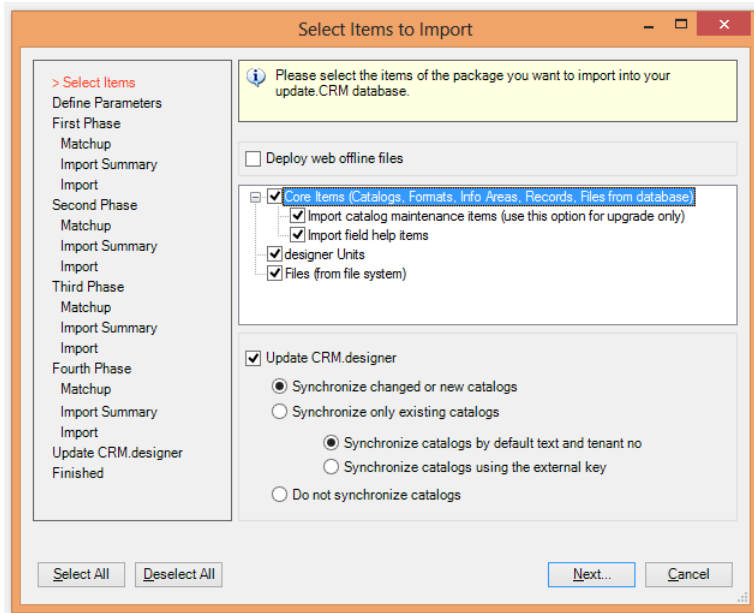

Note: The template package required for installation or upgrade is found inside the TE_<VERTICAL>_<Version>.zip. Ensure that you unzip the above zip file and select the TE_<VERTICAL>_package_<Version>.zip package to import.

Now select the template package and click **OK** in the following prompt.

Be sure to check all items in the following screen, and be sure to check ‘**Import catalog maintenance items**’.

The ‘**Update CRM.designer**’ option uses the same functionality as the **bulkloader**. By enabling this option cockpit automatically updates the CRM.designer database with the current datamodel, catalogs, CRM processes (R4) and roles (R2). You can also choose which catalogs you want to synchronize (**new or changed catalogs**, **sync only catalogs** which are already in the designer or **sync no catalogs**). So you can choose if you want cockpit to do it, or manually do it later using CRM.bulkloader.

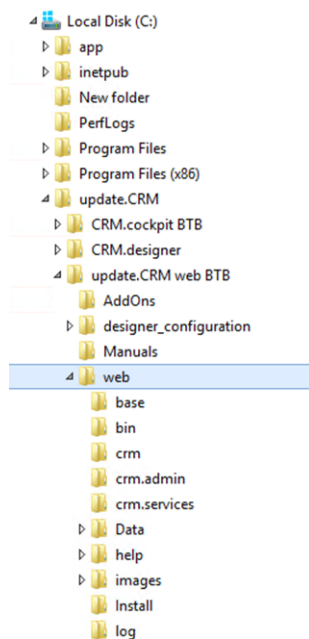

Now you need to select the appropriate destinations for the following parameter paths, these parameters contain files which are required by the template. The \$WEB parameter is mandatory, however you can omit the \$TABLET and \$ADDON parameters, if you do not want to use these products. You can later import the cockpit package again and only import the missing parameters if you need these files (make sure to only check the box ‘Files (from file system)’ in the previous step):

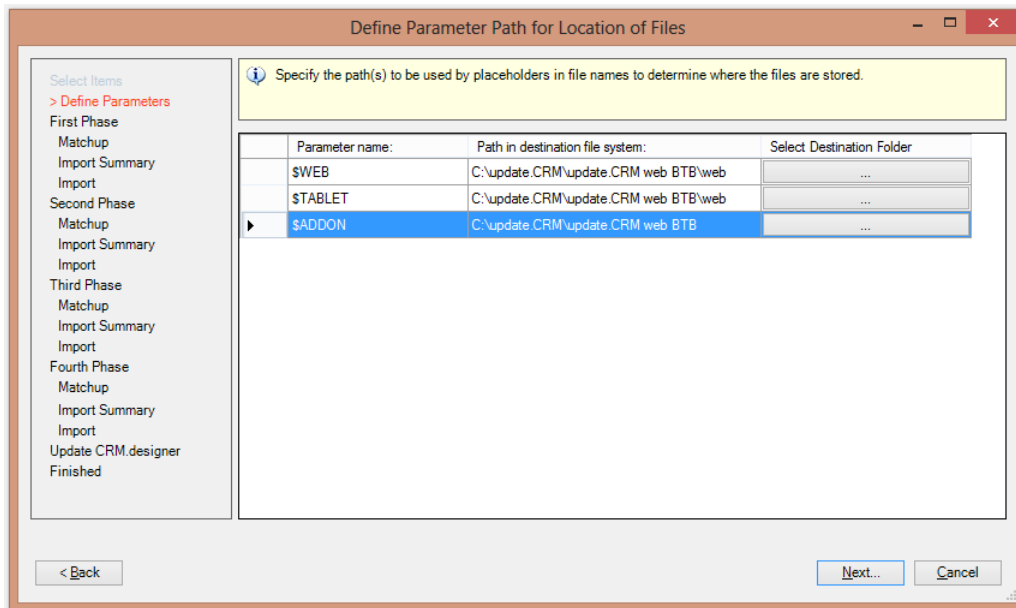

\$WEB: This parameter contains all template files which are needed for Aurea CRM, use the web folder, inside your installation directory, e.g. C:\update.CRM\update.CRM web BTB\web.

\$TABLET: This parameter contains the tablet resources (images) which are required for CRM.pad. The files is extracted to the standard tabletResources folder. Select therefore the same folder that is used for the \$WEB parameter.

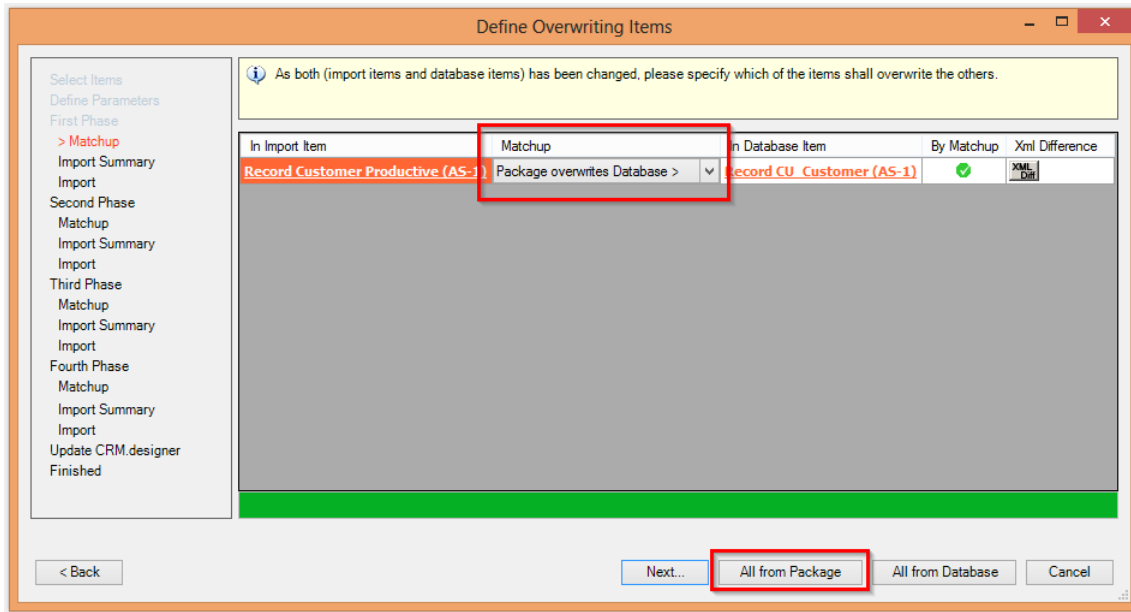

\$ADDON: This parameter contains all settings files which are needed for several add-on products, such as interface or connector. You can place these wherever you want, you need to copy and edit these files before you use them with the product. E.g. select your installation directory, C:\update.CRM\update.CRM web BTB.

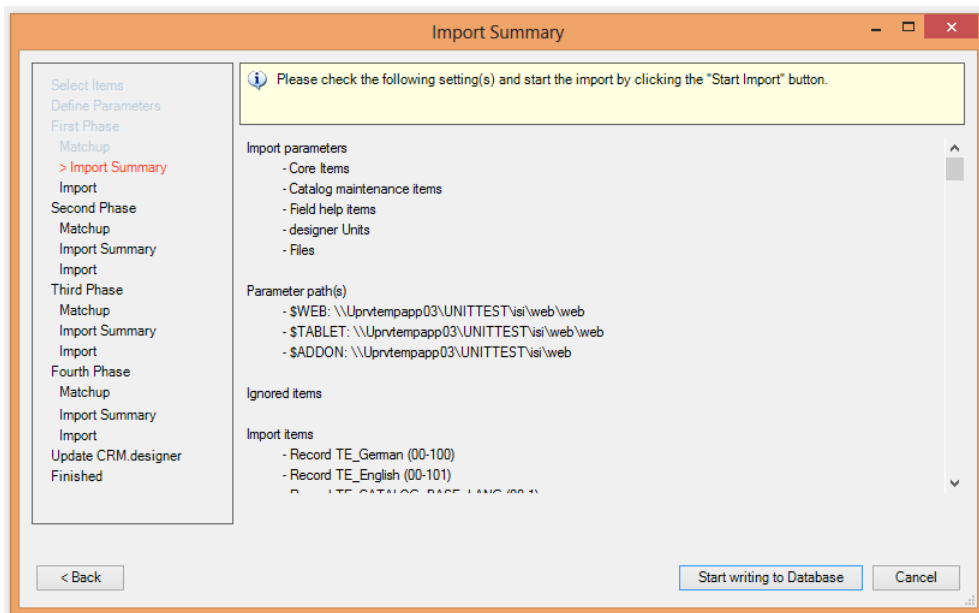

If the button with the three dots is not visible, use the scrollbar at the bottom of the window to scroll to the right or make the window bigger in the bottom right corner. You can also paste your destination path into the second column.

Now the matchup process starts. You should always click on “**All from Package**” if you are importing a template. Then, click on “**Next**”. This matchup process could start two more times depending on what you configured previously. Be sure to select “**All from Package**” every time the matchup is started.

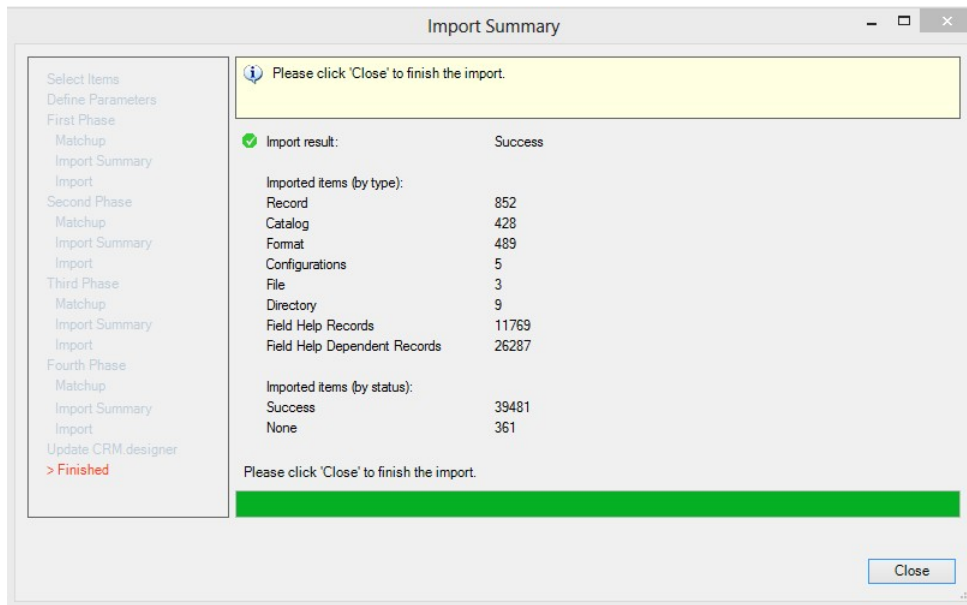

You can now see an import summary. The template is imported after you clicked on “**Start writing to Database**”.

The matchup process then restarts. Be sure to check “**All from Package**”! It is also possible that an empty Matchup window is opened and closed after a few seconds without user interaction. This is intentional as the matchup process did not find any items which were altered in this phase.

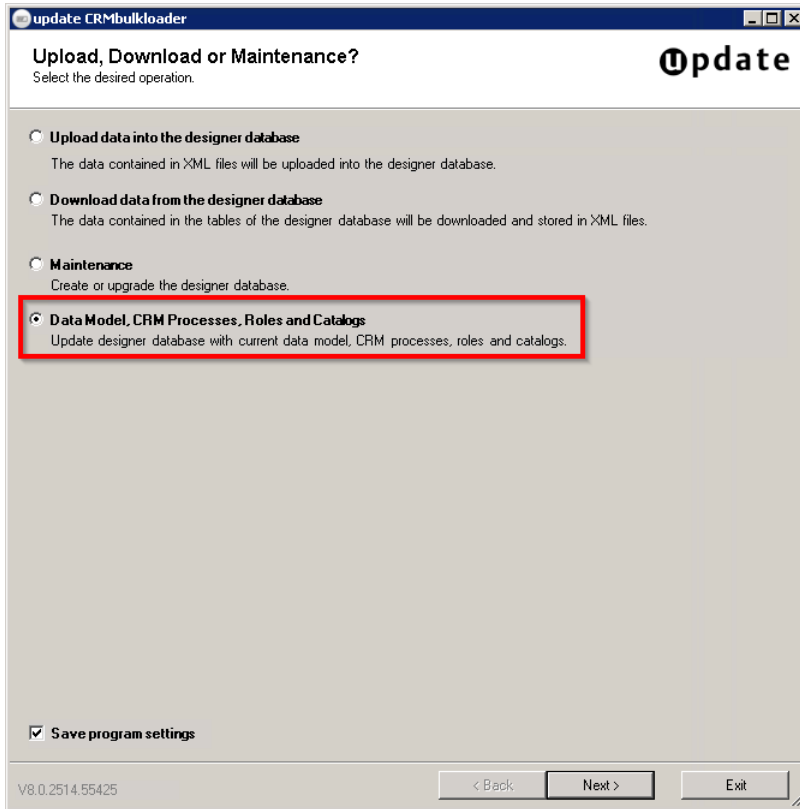

A message should be displayed when the import has finished successfully.

Also, remember to change the `web.config` and `settings.xml`.

Important: The logins and passwords remain the same after the upgrade.

To synchronize the designer and windows database please start the Aurea CRM **bulkloader** located in `...\update crm web\designer\database`.

Provide your SU credentials and the address of your web service. In case you are using RAS, provide your RAS login credentials. The language you select here is the language that the fields are displayed in the designer, e.g. if you select “**eng**” then the fields in designer is displayed in English:

update CRMBulkloader

update CRM Login
Login to update CRM

Update

Login

User name: su Single Sign-In

Password:

Language: eng

update CRMdesigner Web Service URL:
http://localhost/<web>/crm.services/

Test

V8.0.2514.55425

< Back Next > Exit

On the first tab, please click on **Update Data Model**:

update CRMBulkloader

Data Model, CRM Processes, Roles and Catalogs
Update designer database with current data model, CRM processes, roles and catalogs.

Update

Data Model | Processes and Roles | Catalogs

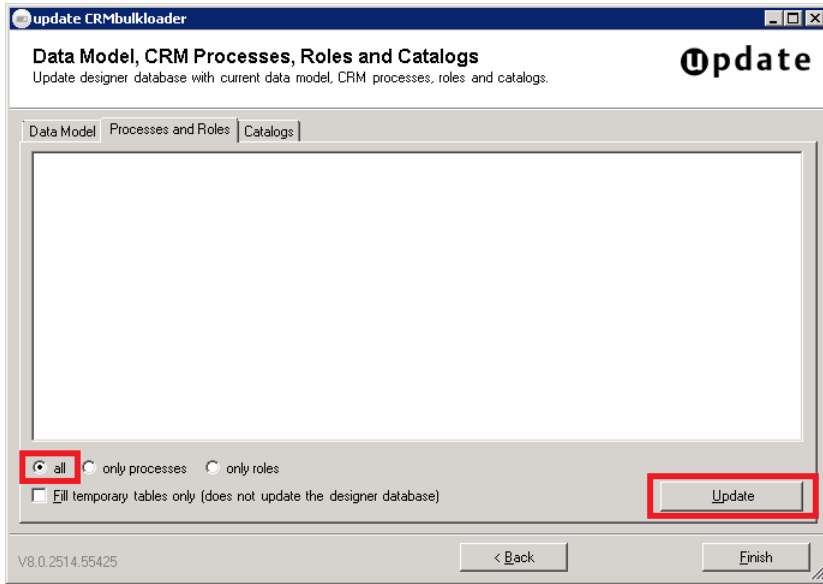

Fill temporary tables only (does not update the designer database)

Update Data Model

V8.0.2514.55425

< Back Finish

On the second tab, please check **all** and then click **Update**:

Upgrade information for ISI Version 2 (BS)

- **ABC Field FI/OJ/Y1:**

- FI:

We are now using the ABC FI/35 field instead of ABC FI/5002, as this is the standard product field. This field is automatically filled by the portfolio. The field is read-only and can only be filled via the portfolio.

Note: The old field is renamed to “-x-“. Please remove the old field from the masks if you copied the template masks to your configuration.

- OJ:

We are now using the ABC OJ/21 field instead of ABC OJ/5022, as this is the standard product field. This field is automatically filled by the portfolio. The field is read-only and can only be filled via the portfolio.

Note: The old field is renamed to “-x-“. Please remove the old field from the masks if you copied the template masks to your configuration.

- Y1:

We are now using the ABC Y1/17 field instead of ABC Y1/5004 as this is the standard product field. This field is automatically filled by the portfolio. The field is read-only and can only be filled via the portfolio.

Note: The old field is renamed to “-x-“. Please remove the old field from the masks if you copied the template masks to your configuration.

- **PR Status Field:**

There is a new Status PR/5045 field which is used in the service reports area. This field is read-only and can only be changed using the buttons in the mask. The Status PR/8 and Stage PR/9 fields have been removed and are not relevant for service reports anymore.

Attention: Please remove the old field from the masks if you copied the template masks to your configuration.

Upgrade Information for ISI Version 3 (BS)

- **Company Type Field – Virtual Info Area (TFI1)**

In version 1 and version 2 we used field 167 as company type field. In version 3 we are using field 28 (array field).

Due to the fact that we are using the array functionality now, we created a new field (FI, 5031) which is now used as a separation of the virtual info area (TFI1).

settings.xml v2:

```
<VirtualSchema>
  <!-- ISI-TEMPLATE Virtual Infoareas must start with "T..." ! -->
  <!-- Company Competitor FI -->
  <InfoArea infoAreaId='TFI1' physicalInfoAreaId='FI' name='Competitor' fieldId='167' fieldType='K' value='Competitor (BASE)' tenantNo='9000'/>
```

settings.xml v3:

```
<VirtualSchema>
  <!-- ISI-TEMPLATE Virtual Infoareas must start with "T..." ! -->
  <!-- Company Competitor FI -->
  <InfoArea infoAreaId='TFI1' physicalInfoAreaId='FI' name='Competitor' fieldId='5031' fieldType='K' value='Competitor (BASE)' tenantNo='9000'/>
```

- Global Extension of the Station Right

We've changed the name of the global extension of the station right from "CU_SR_Global_Extension" to "CU_SR_Central_Global_Extension" to fit the name of the global extension of update.seven.

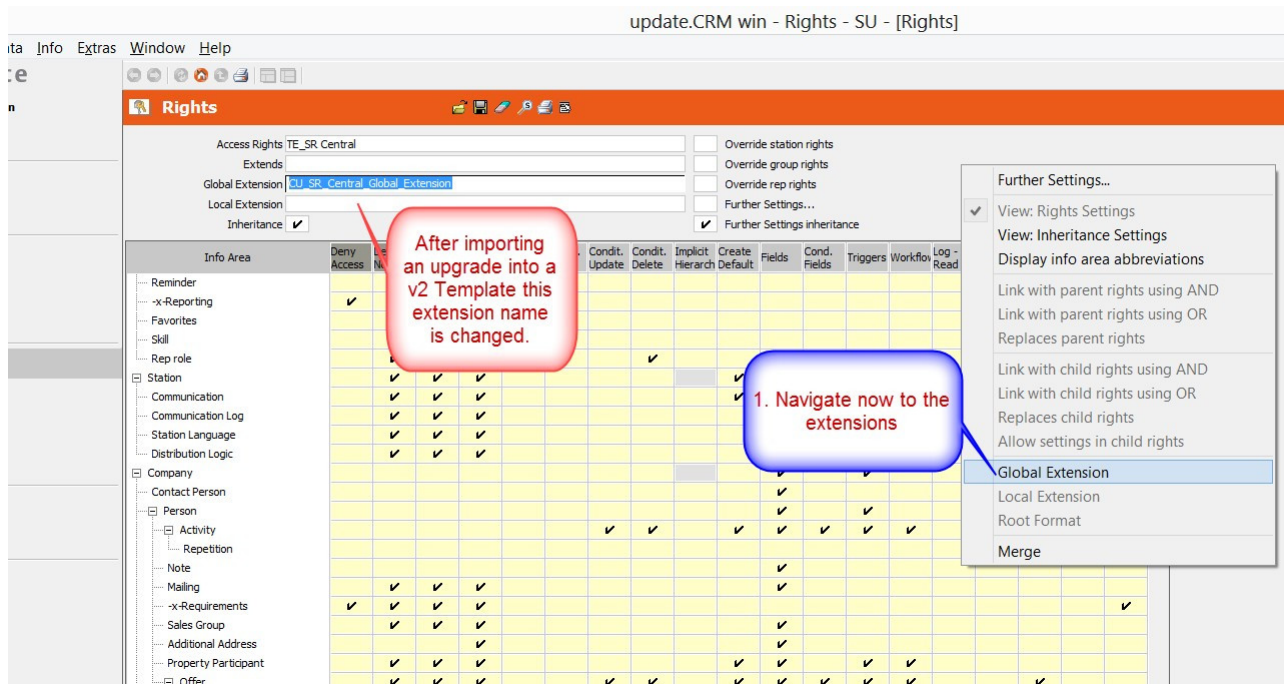

- Station right v2:

- Station right v3:

To merge the old (v2) global extension with the new global extension do the following:

update.CRM win - Rights - SU - [Rights]

Upgrade Information for ISI Version 4 (BS)

For a list of changed designer units, see the Appendix chapter [Changed Designer Units for ISI Version 4](#) on page 95.

- **New Relationship Charts**

From version 1 - version 3 we used fusion charts to display the relationship charts of companies and persons. In version 4 we are using a feature which comes with the standard product. Therefore, we replaced the old buttons and the old menu action with new ones.

Old item	New item
TE_FI_RelationshipDiagram (button)	TE_FI_RelationshipDiagram_v2 (button)
TE_KP_RelationshipDiagram (button)	TE_KP_RelationshipDiagram_v2(button)
TE_A_FI_RelationshipDiagram(context menu action)	TE_A_FI_RelationshipDiagram_v2 (context menu action)

The old items still exist, and can be reactivated.

- **New Variable Definition**

With version 4 we are delivering variable values (which are used for some processes) without a station number (see chapter [Aurea CRM win – Variables \(Z5/Z6\) \(BS\)](#)).

Note: The Template variables is only updated to not include the station number if you did not change the variable as the upgrade should never change customized settings.

- **Deactivated Template Processes**

We are delivering a lot of CRM processes with the template.

The following processes are deactivated by default in version 4 and higher:

Process Name	Process ID (Tree)
QlikView	1.4.7.400
Scura CLM	1.400.2
GIS (Bing Maps)	1.5.2.5.2
Expenses	1.4.10 1.4.10.400
Property Matchup	1.2.401
Lead Management	1.3.6
Social Inbox	1.4.6.3.1
Social Ticket Management	1.1.1.1.19 1.1.1.1.20
Social Product (eg. Idea Management)	1.6
Yammer	1.400.3

- **New Corporate Currency Fields**

With version 4 we are using special currency fields for reports and analyses.

Every report/analysis using the following info areas has been changed: Y1, Y5, PR, AP, AU, UP, OJ, and PO. The following fields have been replaced:

Infoarea	Standard Field	New Corporate Currency Field
Y1	145	5046
Y1	147	5047
Y5	6	5000
Y5	7	5001

Infoarea	Standard Field	New Corporate Currency Field
PR	13	5046
PR	167	5047
AP	19	5026
AP	112	5027
AU	11	5006
AU	140	5007
UP	17	5001
UP	87	5002
OJ	26	5038
PO	5	5001
PO	2	5003
PO	3	5005
PO	4	5007

Upgrade Information for ISI Version 6 (BS)

An new virtual infoarea has been added to the `settings.xml` (TPE1 – Private Customer). Please check out the “`settings_Example.xml`”

Upgrade Information for LSI Version 3 (BS)

- **Changes to Catalog 132 “Order status”**

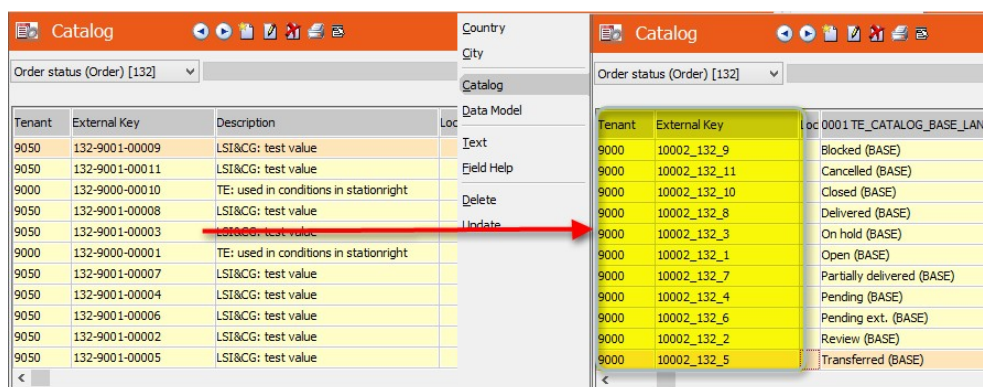

We changed **TENANT** and **EXTERNAL KEY** for this catalog.

These changes is applied by catalog maintenance while upgrading to version 3 to formats but not to designer-catalogs and add-on programming.

Please check your designer catalogs and add-on programming.

Value in BASE Language	Version 2		Ver- sion3	
	Tenant	External Key	Tenant	External Key
Blocked (BASE)	9050	132-9001-00009	9000	10002_132_9
Cancelled (BASE)	9050	132-9001-00011	9000	10002_132_11
Closed (BASE)	9000	132-9000-00010	9000	10002_132_10
Delivered (BASE)	9050	132-9001-00008	9000	10002_132_8
On Hold (BASE)	9050	132-9001-00003	9000	10002_132_3
Open (BASE)	9000	132-9000-00001	9000	10002_132_1

Review (BASE)	9050	132-9001-00002	9000	10002_132_2
Transferred (BASE)	9050	132-9001-00005	9000	10002_132_5

Version 2 compared to version 3:

- **Variable (Z5) “TE_Calls.ConditionCallTypeCreatePOSMonitoringHeader”**
Please delete all existing Z6 records for the “TE_Calls.ConditionCallTypeCreatePOSMonitoringHeader” variable.

We have changed the Type of this variable and therefore deleted all related Z6 records. However, deletions are not transported by a template upgrade package so you have to do it manually.

Upgrade Information for LSI Version 4 (BS)

- **Relationship Hierarchy - Update Relationship Level (B5)**

Since version 4 we are using the new SP2 feature called “Relationship Hierarchy” in the sales rep right “TE_RR Sales – CG”. Therefore, you have to generate relationship records for your existing data. New relationships already creates a so called hierarchy record.

Go to the **WIN module >> Relationship Level**, and select the “**is a department of (BASE)**” relationship and right-click “**Generate Relationship Hierarchy**”. If you want to use a different relationship type in rights you must also generate these types.

- **Trigger 'TE_PS_NEW_Create POS Monitoring Header'**

We have removed the 'TE_PS_NEW_Create POS Monitoring Header' trigger from the MA info area in the station right.

Now it is possible to create more than one visit per day per rep for an account. From now on the PS record is created in WEB within the call documentation process in the POS monitoring phase. The CRM.pad also takes care of creating the PS record on the client-side.

- **New Variable Definition**

With version 4 we are delivering variable values (which are used for some processes) without a station number (see chapter [Aurea CRM win – Variables \(Z5/Z6\) \(BS\)](#)).

Note: The Template variables is updated to not include the station number if you did not change the variable as the upgrade should never change customized settings.

Upgrade Information for LSI Version 5 (BS)

Conditional Access for FI via Rep Reference

With this version we are using a new core product feature “Using Rep References for Rights Definitions (#84936)”. This makes the former template logic for splitting of SB-records redundant.

Attention: It is still possible to use the former splitting logic and field “functional role”! All necessary formats are still available in the template. Please customize manually in your customer’s project if you still want to use it in that way.

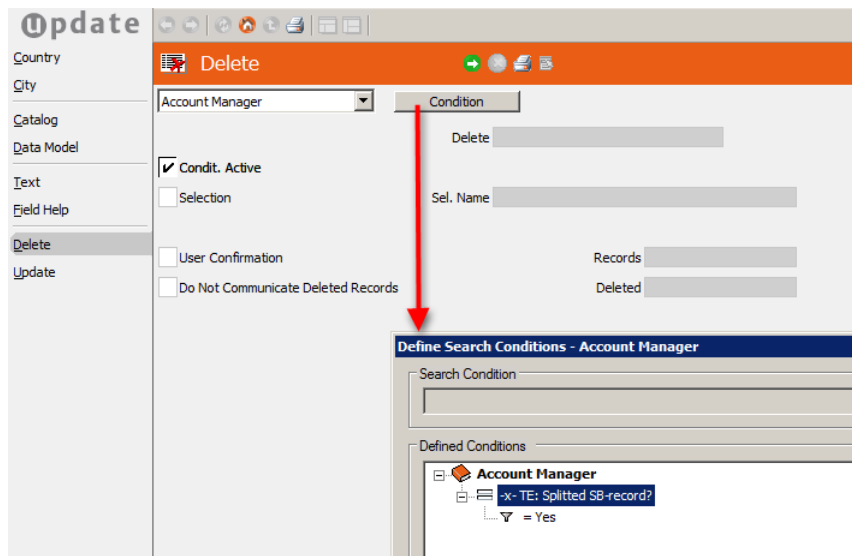

The index for info area SB has been modified with version 5. The field „Functional Role“ (SB.5008) was removed from the index. This field was used for all split SB-records.

No.	ID	Properties	Fields	Additional index fields
1	1		FI_StaNo,FI_SerNo,PE_StaNo,PE_SerNo,Business area,-x- Item type,-x- Indication group,-x- Route User,RO_StaNo (index)	..x-Functional Role.....
2	2	[ID]	SB_StaNo,SB_SerNo	
3	3	[DUPLICATE,NOT NULL]	-x,-x-[UPPER,NOT NULL,BINARY SORT]	
4	4	[DUPLICATE,NOT NULL]	PE_StaNo,PE_SerNo[NOT NULL],FI_StaNo,FI_SerNo	
5	200	[DUPLICATE]	RO_1_StaNo,RO_1_SerNo	
6	201	[DUPLICATE]	Business area,FI_StaNo,FI_SerNo,PE_StaNo,PE_SerNo	
7	202	[DUPLICATE]	FI_StaNo,FI_SerNo,PE_StaNo,PE_SerNo,Business area,-x- Functional Role	

To activate this new feature you have to do the following steps:

1. Go to Maintenance >> Data Model >> Account Manager (SB) >> Index and click “Apply Info Area” to apply the changes marked in red. (Cockpit does not apply these changes automatically!)
2. Delete the existing split SB-records from your database. This is done by means of a maintenance/deletion run: Delete all SB-records with field “TE: Split SB-record?” (SB.5009) == “Yes”.

This deletes all records created by the template workflows. The data contained in these records is a duplicate of the SB records created manually or by the standard product logic.

3. Activate the “Calculate rep reference” for your customer’s station in the rights module >> station configuration. Field “Calculate rep reference” must be set to true. Due to performance it is not recommended to activate this feature on offline stations.

4. Check the data model and check column “Depict rep reference” for the uid fields you want to use as a rep reference. This has been already done for all fields part of the standard product or template. For fields added in the project you need to do this.

ID	Name	Type	Reference	Catalog	DB Column	Time star	Length	Properties	Format	Depict rep reference
0	-x- Item type	var catalog		(80) Item type	Segment		80	in()		
1	-x- Indication gro	var catalog		(69) Indication group	WarenGr		80	in()		
2	-x- Route User	uid	-x- Route User Group		BetreuerId		10	no sum , rep	leading zero ,	
3	SB-StaNo	sno(2Byte)			ID		5	no sum		
4	SB-SerNo	lno(4Byte)			ID		9	no sum		
5	Account Manager	uid	Account Manager Gro		BezirksleiterId	✓	10	no sum , rep	leading zero ,	✓
6	Account Manager	uid	Account Manager 2 C		Verkaufsdirekt	✓	10	no sum , rep	leading zero ,	✓
7	Account Manager	uid	Account Manager 3 C		Verkaufsdirekt	✓	10	no sum , rep	leading zero ,	✓
8	Account Manager	uid	Account Manager 4 C		KeyAccountInt	✓	10	no sum , rep	leading zero ,	✓
9	Account Manager	uid	Account Manager 5 C		KeyAccountnat	✓	10	no sum , rep	leading zero ,	✓
10	Account Manager	uid	Account Manager 6 C		KeyAccountreg	✓	10	no sum , rep	leading zero ,	✓
11	Account Manager	uid	Account Manager 7 C		KeyAccountSch	✓	10	no sum , rep	leading zero ,	✓
12	Account Manager	uid	Account Manager 8 C		InDI	✓	10	no sum , rep	leading zero ,	✓
13	Region Manager	uid	Region Manager Gro		Verkaufsfoerde	✓	10	no sum , rep	leading zero ,	✓
14	Sales Manager	uid	Sales Manager Group		VertreterId	✓	10	no sum , rep	leading zero ,	✓

5. Check conditional access conditions for your customer rights and change the conditions to the rep reference info area if necessary. This has been already done for all rights part of template. For rights added or modified in the project you need to do this.

The screenshot shows the 'Rights' configuration window. The 'Access Rights TE_RR Sales - CG' section is visible. Below it, the 'Info Area' table lists various roles and their access conditions. A red arrow points to the 'Condit. Access' column for the '(F) Account' role. Another red arrow points to the 'Condit. Access' column for the '(10) Rep reference (1-0)' condition. A third red arrow points to the 'Define Search Conditions - Rep reference' dialog box, which shows a tree view of conditions including 'Rep ID', 'Current User (F)', 'AND Link to Info Area', and 'SB'.

6. Designer: Check your SB masks and lists in your own designer configurations if you have copied them to your configurations or to any user configurations.
7. SQL Tool >> Calculate Rep Reference

This setting enables the table “Rep reference” (10). As this table has to be filled you need to carry out the creation of records by starting the SQL tool (mmba.exe -q):

- a. Select an info area for which rep references are configured.
- b. Click on Calculate rep reference.

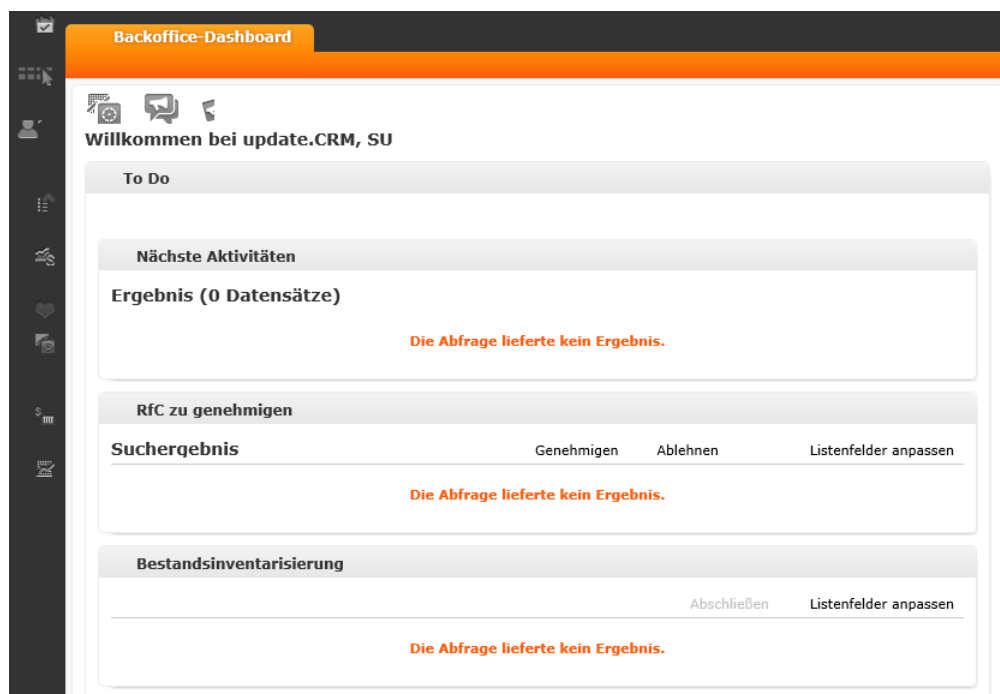

Use the ReCreate Procedure and ReCreate All Procedures buttons to re-create the database triggers.

Troubleshooting

Learn to troubleshoot certain known issues.

Strange Images (BS)

If you are seeing something like this:

Please delete your browser cache!

"Bad Request" Instead of Start Page (OP)

If you are using the hotfix version (Aurea CRM web 8.0.2686, Aurea CRM win 8.0.742) you may encounter this bug.

Symptom

The template shows a “Bad request” message on the start page after patching CRM.web and upgrading the designer configurations.

Reason

The currently released version of the template uses the “framework/start.aspx” and “mm/start.aspx” sites that were deprecated in the meantime.

These sites are replaced in the current version of CRM.web.

Solution

The next hotfix of CRM.web (July) can handle such deprecated calls. The LSI template changes to a supported start page in an upcoming hotfix.

Until then, please start this script in your designer database (once only) to replace the legacy paths:

```
-- replace legacy paths into 'mm/...' and 'framework/...' with 'crm/...'  
update portal_page set [call] = 'crm/' + substring([call], 4, len([call]))  
where [call] like 'mm/%'  
  
update portal_page set [call] = 'crm/' + substring([call], 11, len([call]))  
where [call] like 'framework/%'
```

LSI Marketing User – Marketing Role – Designer Problem (BS)

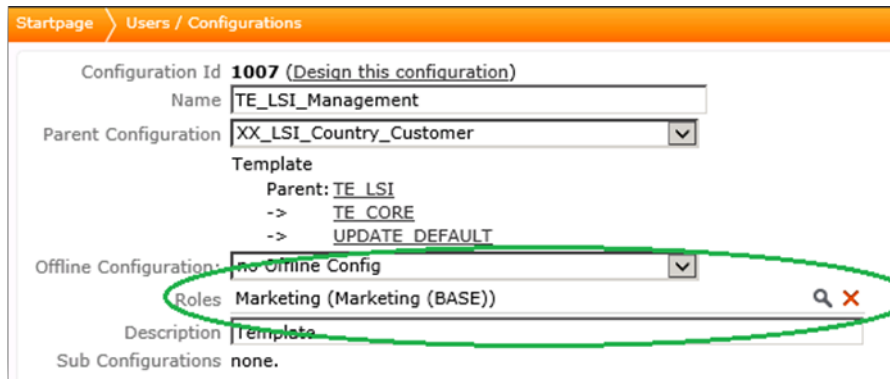

Problem Description

A user logging in to Aurea CRM web as a marketing user, cannot modify his/her user configuration. For example, the current user cannot save changes in the user configuration.

Solution

A small adaption in update.CRM Designer is necessary to fix this problem.

1. Click on “Users” on the designer start page and then the “Configurations” radio button.
2. Modify the TE_LSI_Management group configuration.
3. Delete the defined “Marketing (Marketing (BASE))” role in the TE_LSI_Management group.

4. Reset the IIS (recommended).

3

Data Prerequisite

Data Prerequisite for the additional installation to the common installation of web offline product.

Below are the Data Prerequisite for installation of web offline industry business solution products:

ISI (BS)

Data Prerequisite for ISI (BS).

Plan Visits on Map

To use the 'Plan Visits on Map' feature, your companies and persons need to be geo-coded.

Service Management

Please make sure that you configured all variables correctly (see chapter [Aurea CRM win – Variables \(Z5/Z6\) \(BS\)](#)).

Opportunity Management

Please make sure that you configured all variables correctly (see the chapter [Aurea CRM win – Variables \(Z5/Z6\) \(BS\)](#)).

LSI (BS)

Data Prerequisite for LSI (BS).

Specific data/configuration is required for the following processes.

Country records (LA)

Please create the country records (infoarea LA) for your customer. You need country records to be able to create child records like City (OR), Global KPI (U022), LSI-Template Configuration (U012). Otherwise it is not possible to create child records.

Info: The following records are already shipped:

- Austria
- Germany
- United States

Call Planning

Create the “Use geo-coordinates” parameter in the LSI Configuration table (U012):

Country	Rep (n...	Config. category	Config. option	A	Ii	I
Germany		AddOn	Call Planning: Priority	<input checked="" type="checkbox"/>		
Germany		AddOn	Call Planning: Priority	<input checked="" type="checkbox"/>		
Germany		AddOn	Call Planning: Priority	<input checked="" type="checkbox"/>		
Germany		AddOn	Call Planning: Waiting time coefficient	<input checked="" type="checkbox"/>		
Germany		AddOn	Call Planning: Use geo-coordinates	<input checked="" type="checkbox"/>	1	
Germany		AddOn	Call Planning: Avoid visit duplication period	<input checked="" type="checkbox"/>	7	

Fill it with the QueriesInfo XML

LSI Configuration for Germany, AddOn

Country: Germany
Active:

Config. category: AddOn
Config. option: Call Planning: Use geo-coordinates

Parameters:

Integer 1: 1

Logical 1:

```

Custom parameter: QueryInfos
<CalendarQuery name="TE_CallPlanning_Calendar" active="true">
  <Variables>
    <Var name="RecId" infoareaAlias="MAFI"/>
    <Var name="RecId" infoareaAlias="MACP"/>
    <Var name="StartDate" infoareaAlias="MA" fid="0"/>
    <Var name="StartTime" infoareaAlias="MA" fid="11"/>
    <Var name="EndDate" infoareaAlias="MA" fid="98"/>
    <Var name="EndTime" infoareaAlias="MA" fid="111"/>
  </Variables>
</CalendarQuery>

```

Please review the technical documentation for more detailed information.

Sample Management

The following conditions have to be fitted to add new sample items using the serial entry.

- Samples can only be added if the MA is linked to a Person (PE). If not, it should not be possible to add sample items via the serial entry.
- The activity has to be today.
- The person must be the "Doctor" person type.
- The “Block samples” flag (in PE) may not be true (this flag is set automatically if there are more than 2 samples issued in one year per AR record - linked to the person).
- Item master products (AR), which is submitted as a sample, have to have a sample configuration (MK) for the same business area as the currently logged in user (u8 business logic).
- Sample configuration:

Business area	Allocated	Launch start	Launch end	Units during launch	Units after launch
Rx	<input checked="" type="checkbox"/>	01.05.2013	26.05.2013	10	4

The “Allocated” flag has to be set to true! And there must be a value in the “Units after launch” field. For example, there is a sample configuration with value 4 in the “Units after launch” field. On CRM.pad the user has the possibility to add values in the “Quantity issued” and “Order quantity” fields in the serial entry of samples. Because there are only 4 units which could be issued to a doctor the user gets an error if he enters a value of “3” in the “Quantity issued” field and “2” in the “Order quantity” field (error message: “Your entry could not be saved (partially)”). If the user enters a value of “2” in the “Quantity issued” field and “2” in the “Order quantity” field there is no error thrown.

- If values are entered in the “Units during launch”, “Launch start” and “Launch end” fields then the value of “Units during launch” is used to check quotas (the start date from the root MA record must be within the date of the “Launch start” and “Launch end” fields, otherwise the “Units after launch” field is used).
- If there are no values entered in the “Units after launch” or “Units during launch” fields the actual limit of samples per person per period is 2 samples.
- The actual available items for a specific date is calculated based on the number of periods and the number of samples per period:
- If there is a MJ record with a value in the “End of Period” field and this date is after the current date, the remaining quantity is the quantity minus the value of “Issued” field (Items) (if there are multiple records, the record next in size is used for calculation).
- If there is no server connection, MJ records is created offline (automatically), but not sync.

Territory Management

The territory management defines which rep is assigned to which company/person. For person-related reps fill the following mandatory fields:

- TenNo
- Business area / Geschäftsbereich
- Institution type / Institutionstyp
- Subject / Hauptfach

You need to create records for every institution type for every subject.

GL_TenNo	Business area	Account type	Specialty	Allocation code
9101 Rx		Association of SHI Physicians		
9101 OTC		Association of SHI Physicians		
9101 Rx		Beverage markets (BASE)		
9101 Rx		Home for the Elderly		
9101 Rx		Hospital		
9101 OTC		Hospital		
9101 Rx		Hospital Department		

Fill the following mandatory fields for the FI-related rep:

- TenNo
- Business area / Geschäftsbereich
- Institution type / Institutionstyp

Key Account Management

Set up the CRM.server correctly to use the Campaign/Activity Management.

There are 2 similar prerequisites for Key Account Management (bulk listing and creation of jobcards). Here you can see the data structure on which KAM is based.

Query im Form results on right hand side with:

- CoD A (Channel of Distribution) – virtual node
- CoD B (Channel of Distribution) – virtual node

Creation Listings results in records (Listing and Listing Items) linked to:

- CoD A
- CoD B

Creation Jobcards results in records (AF) linked to:

- Supermarket B1 (child node of CoD B)
- Supermarket A (child node of CoD A)
- Supermarket B2 (child node of CoD B)

Tip: The company record should be flagged as “Key Account” to see all nodes (KAM node, account plans and detail plans) in the FI treeview.

Bulk Listing

On starting the bulk listing you get a list and query result.

Prerequisites:

1. Starting from Detail Plan (Y1) you need to create at least one Plan Product (U500). These records are displayed on the left side.
2. The Detail Plan (Y1) is linked to a company (FI). This account needs relationship data sets (PB) to other companies with the “has channel of distribution” relationship type (German: “ist Vertriebslinie von”). The right hand side displays the result from the 'TE_KAM_ChannelOfDistribution' query. If no results are available you can search for any company.

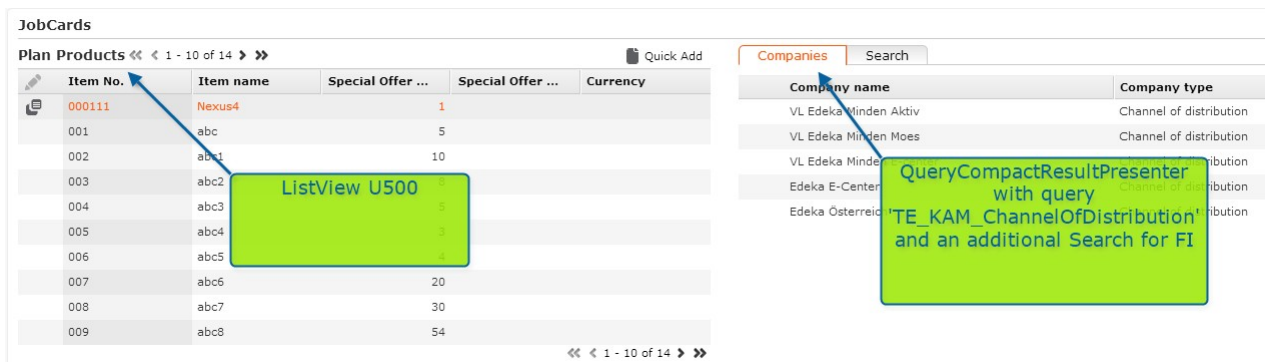

Additional Info for Presenting this Feature:

- At least two detail plans are required as related data of the account plan (e.g. one for listing, one for promotion/special offer).
- Listings which are created by the “Bulk Listing” functionality can be easily looked up in the reference book -> root record and listing items.
- Listing items are inherited to the supermarkets (“inherits to” relationship type) and is displayed in POS Monitoring and Order when the “Listing” filter is used.

Jobcards

For the “Jobcards” functionality please make sure that the CRM.server is running. For your information: the jobcards (work orders AF) are added through the business logic of the campaign management. The CRM.server rep MUST have the correct role to be able to create eg. MA, AF,...

On starting the JobCards you get a list of U500 and a query result for companies.

Prerequisites for Job cards:

1. For the “Jobcards” functionality please make sure that the CRM.server is running. For your information: the jobcards (work orders) are added through the business logic of the campaign management.
2. Starting from Detail Plan (Y1) you need to create at least one Plan Product (U500). These records are displayed on the left side.
3. The Detail Plan (Y1) is linked to a company (FI). This account needs relationship data sets (PB) to other companies with the “has channel of distribution” relationship type (German: “ist Vertriebslinie von”). The right hand side displays the result from query: 'TE_KAM_ChannelOfDistribution'. If no results are available you can search for any company.

Additional Info for Presenting this Feature:

- The Jobcards were added to the supermarkets which are connected to the selected „channel of distribution“ with a “is parent node of” relationship type. The target group for the Execution (AD) is defined in that way.
- In the KAM Calendar (opened via QuickLink on the Key Account Management start page or via the “Marketing” -> KAM Calendar application menu) all marketing activities are displayed in Calendar week view.
- Above the temporal bar it is displayed how many jobcards were already completed in comparison to the total number.

The progress is announced on the joist in color. A click on the joist opens the details view of the marketing activity in the new tab and also shows the related data (relevant jobcards).

Global KPI

- Data prerequisite: A Company (FI) or Role (CP) record with an associated Account Manager (SB) must be available.
- Create a Global KPI record
 - The Country must be the same as the company’s country.
 - The Year and Period must be in the current date range.
 - The Business Area must be identical with the account manager’s business area.
 - Target visits must be entered.
 - The Classification must be the same as the company’s classification.
 - The KPI type must be either “Target visits – Account” for FI-related KPIs or “Target visits – Person” for CP- related KPIs.
- Example for a global KPI-record:

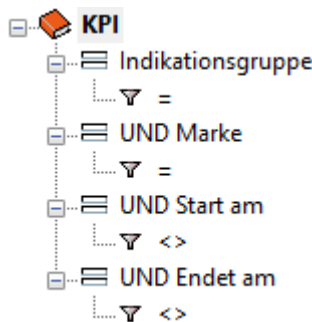

KPI (Global) for 2013, 4th Quarter

Country: Vatican City State Year: 2013 Business area: Rx
 Period: 4th Quarter Starts on: 01.10.2013 Ends on: 31.12.2013
 Classification: C Target visits/...: 5

Details

KPI type: Target visits - Account Account type Specialty

- Workflow logic and conditions
 - Loop over all SB records (where business area <> empty)
 - Get business area from current SB record
 - Look for a linked KPI record (U007) for the current FI/CP with the following condition:

- Create a new KPI if no KPI is found.
- Update the found record if a KPI is found. (KPI must have the same business as the SB that is to be updated).

KPI Report

-
- A calendar has to be defined within the ID record.
 - Values for the occupation overview are used from the occupation management from B2 records. One day is split into 4 parts. It doesn't matter if the occupation approval status from B2 is approved or not. Each record is used for calculation.
 - Only if an activity is completed (manually or via Call Documentation process) it is used for calculation.
 - To get only the records for the appropriate language, the station right has to be changed for the CD info area. The condition that has to be set, links the Calendar Id to that of the user, so any other calendar entry cannot be selected. In the admin role, this condition is removed. This is done because there is no link between the involved infoarea.

FSI (BS)

Data Prerequisite for FSI (BS).

Master Data Type

Company records need to have a master data type (fieldId 29). Basically, this field is mandatory and therefore should never be empty. Please take care that this field is filled otherwise no mask is displayed.

Incident Management

Due to the fact that incident management is using CRM.server for generating incidents (AF) you have to consider to register a CRM.server service for the specific tenant. For example:

```
\"../system/exe/mmsserver.exe  
--install -n <Servicename> -u <User> -p <Password>
```

We deliver a variable with the name "TE_TD_Set_U8_ServerUser" and a variable value (Z6) for tenant 1. If you are using other tenants then please consider that you have to create a new variable value for your new tenant.

Installation WEB – OFFLINE (BS)

Learn about the server and client configuration for Web- offline installation.

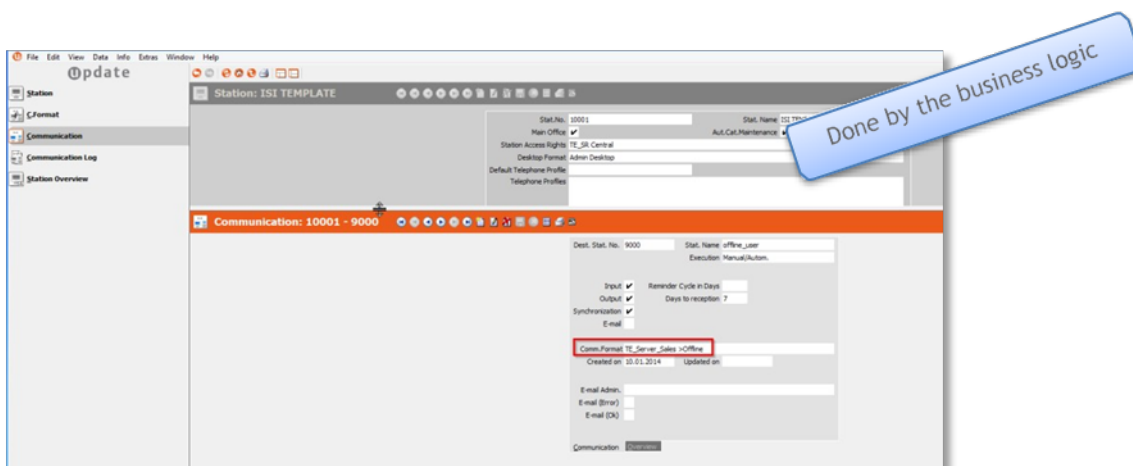

This offline installation is in addition to the common installation guide of the web offline product.

Template ISI Web Offline Installation

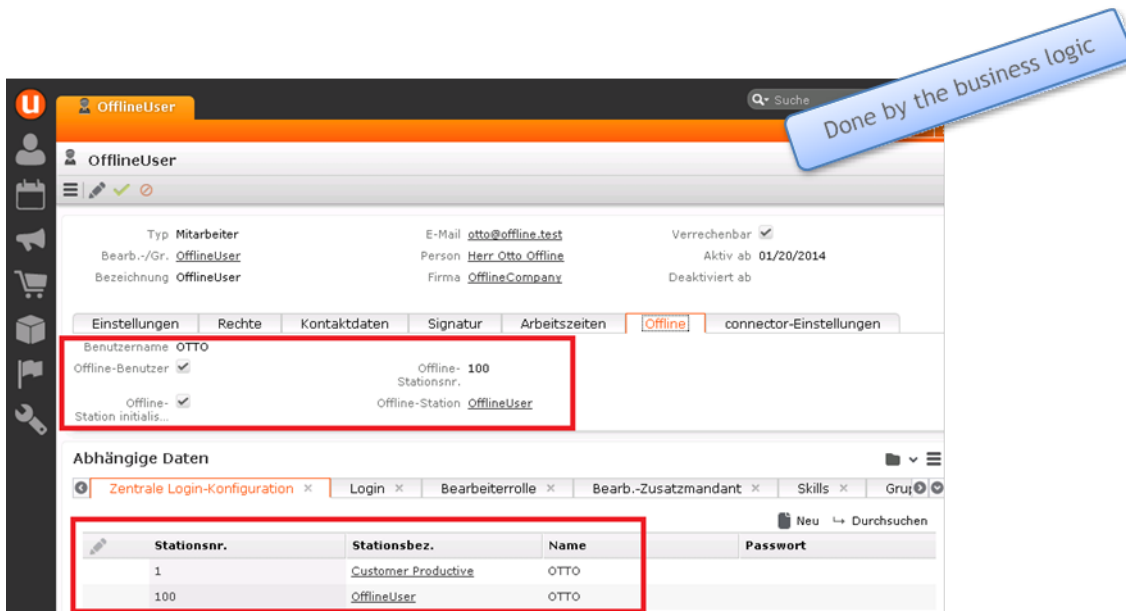

Server

On the server perform the following:

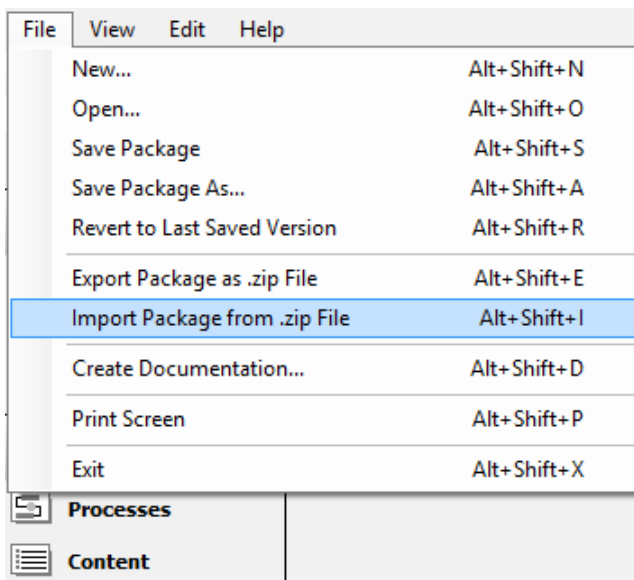

1. Create a new person for the system company (synonym = “system company“)
2. Create a new rep (assign pre-created person to rep and ensure that the e-mail field is filled)
3. Assign a login role for the rep (e.g. Sales or Service)
4. Check if the rep can log in and that the role is assigned
5. Assign the “offline” role to the rep
 - The station is created automatically (consecutively numbered beginning with station number 100)
 - Central login configuration for the actual and the offline station is created
 - Communication for the right stations is created

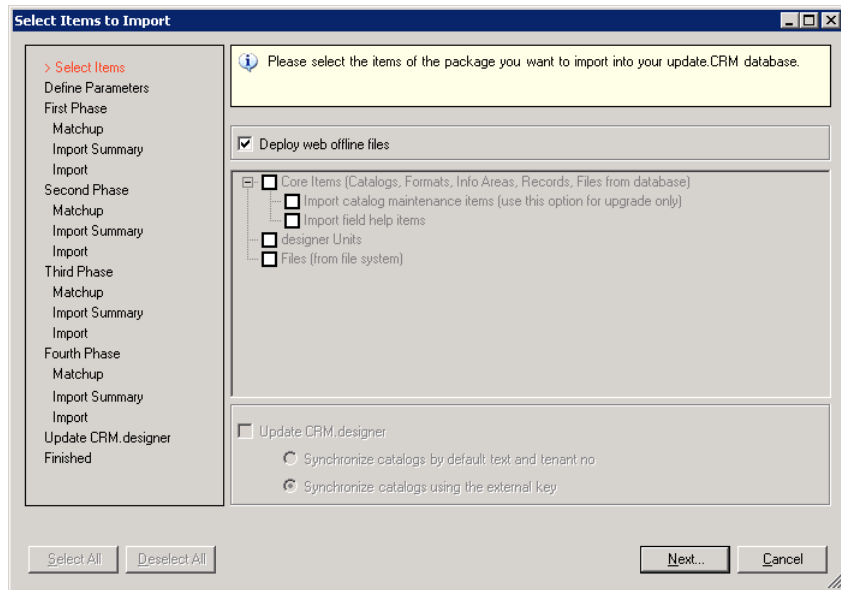

- Several entries to the rep are set (e.g. username, offline user, offline station initialize,...)

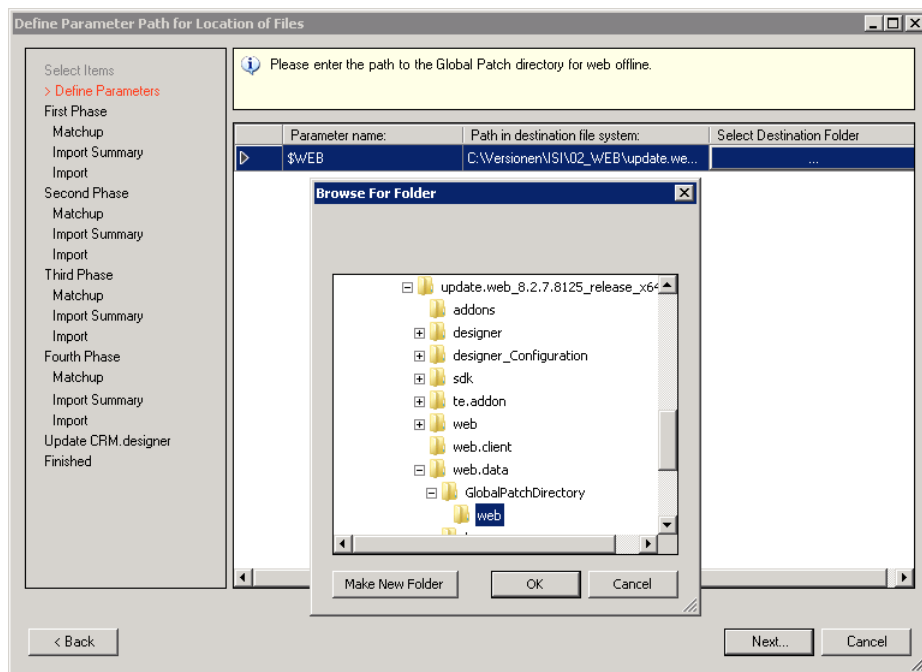

6. Exportfortheoffline station(e.g. "C:\ProgramFiles\update.CRM\update.CRMwin BTB\system\exe\mmco.exe" -u "SU" -k "out,100,u")
7. A new "GlobalPatchDirectory" directory has to be created in \update.CRM\update.CRM web BTB\web.data\.
8. A new "web" directory has to be created in "..\update.CRM\update.CRM web BTB\web.data\ GlobalPatchDirectory\"
9. Start cockpit and click on "Import Package from .zip File" and select the **ISI Template package**.

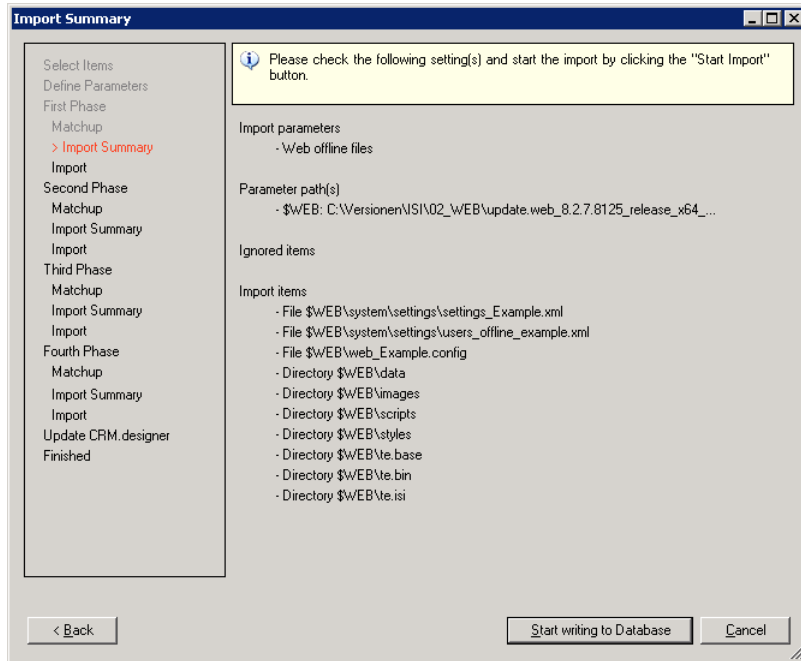

10. Select the **Deploy web offline files** checkbox.

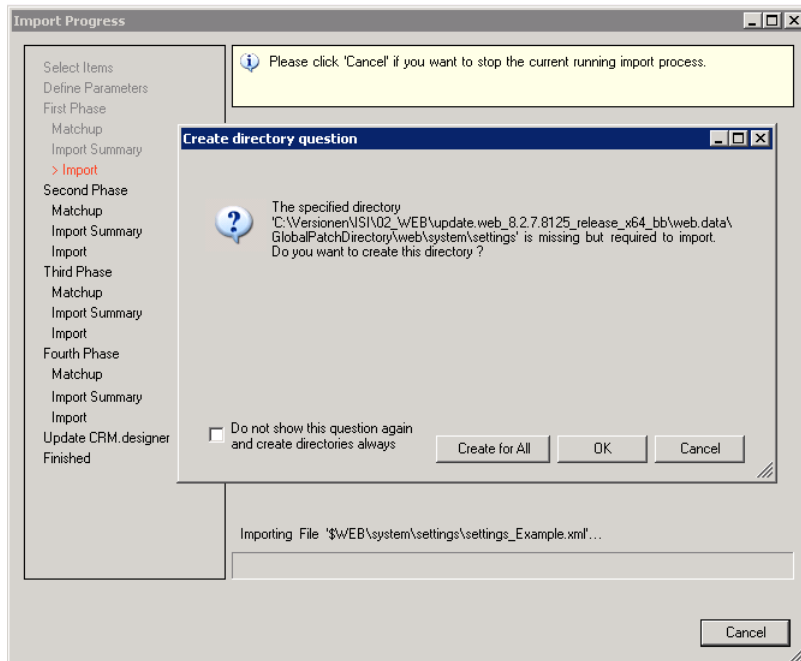

11. Select the newly created web folder in the **GlobalPatchDirectory**.

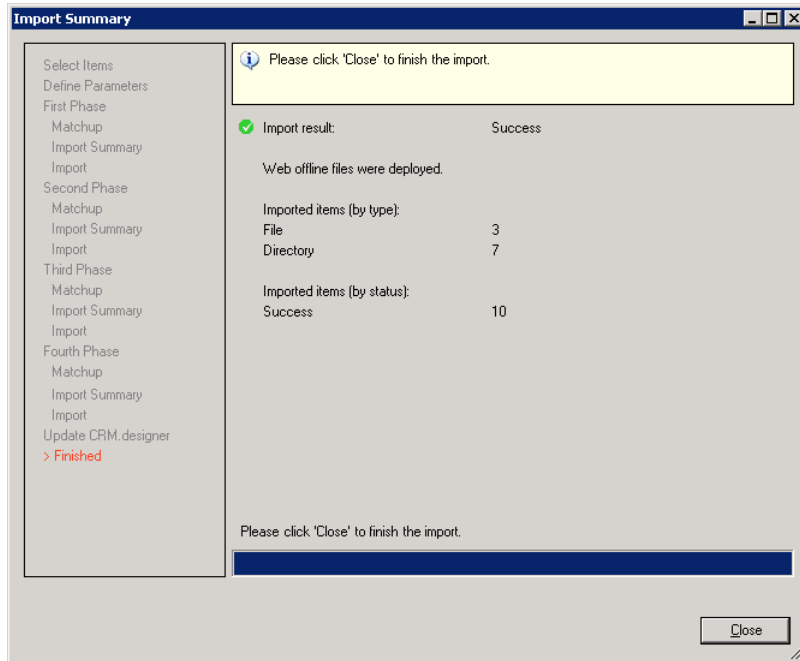

12. Click on the **Start Writing to Database** button.

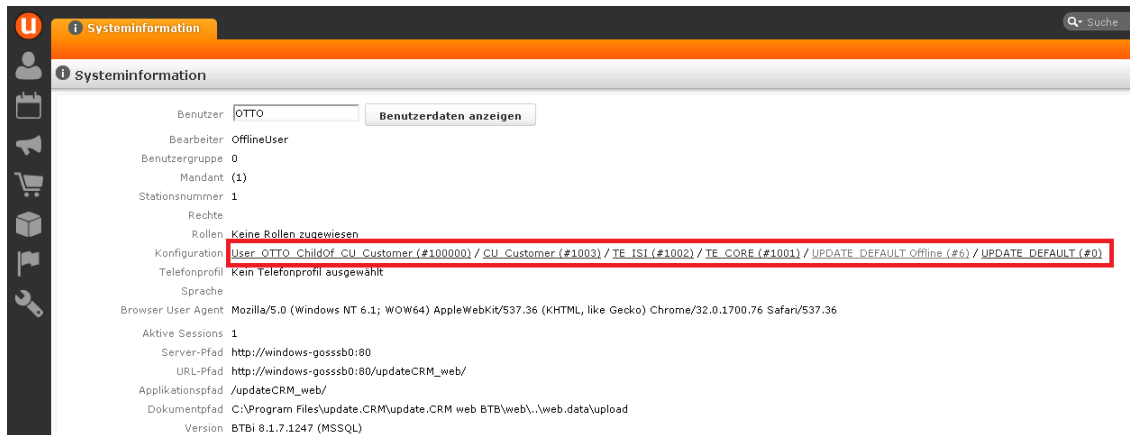

13. When this message pops up you have to click on the **Create for All** button.

14. Import has finished.

- Copy only the global relevant configurations into the “GlobalPatchDirectory” (Login as “SU”, go to “Settings” on “System information”, enter your Offline user in the “user” field and then select the configurations to download them, e.g. “UPDATE_DEFAULT”, “UPDATE_DEFAULT_OFFLINE”, “TE_CORE”, “TE_ISI”, ...).

- Adapt the `offline.xml` on the server (Please note that all parameters are mentioned in the Product Installation Guide of Web Offline).

Note: The user must have full access to the DatabasePath (Path to the local database file). Aurea recommends specifying a dedicated target directory for InstallDir and DatabasePath (e.g. InstallDir=C:\update.CRM) and defining sufficient access rights for this directory: This ensures that users working with Aurea CRM web offline are able to create and modify files and folders (write/modify rights).

Note: Ensure that you configure these two web configuration parameters:

- Offline.RootConfigurationToSync
 - Offline.IncludeRootConfigurationInSync
-

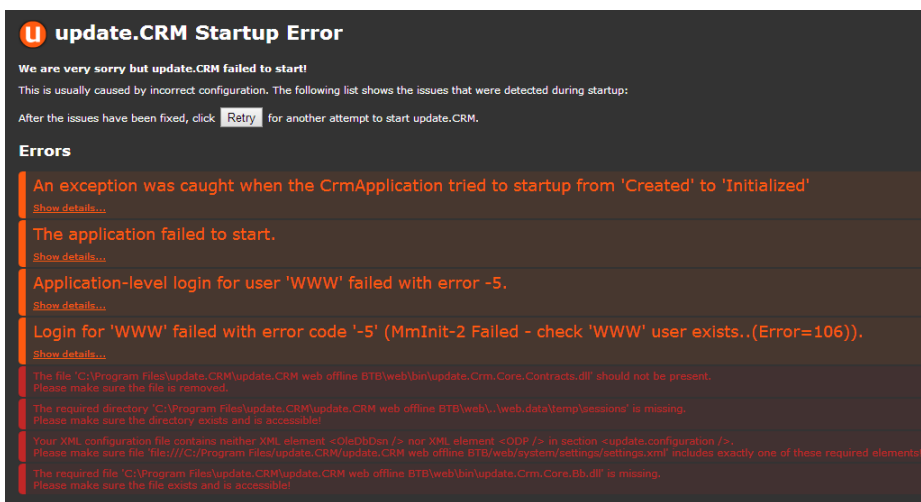

Client

1. Adapt SilentClient.ini, for example:

```
COMUserName=<User>
COMUserPassword=<Password>

[STATIONCONFIGURATION]
StationNumberClient=<100>
StationNumberServer=<1>
ServerURL=<http://mywebserver/updateCRM_web>
ClientURL=http://localhost:7575
```

2. Install web offline (execute setup.exe)
3. Patch web offline and launcher to the actual version (actual web offline and launcher packages are available on <https://support.aurea.com>)
4. Start the launcher and initialize
 - Afterwards the web offline starts with a error message.

• Please change or adapt the following files

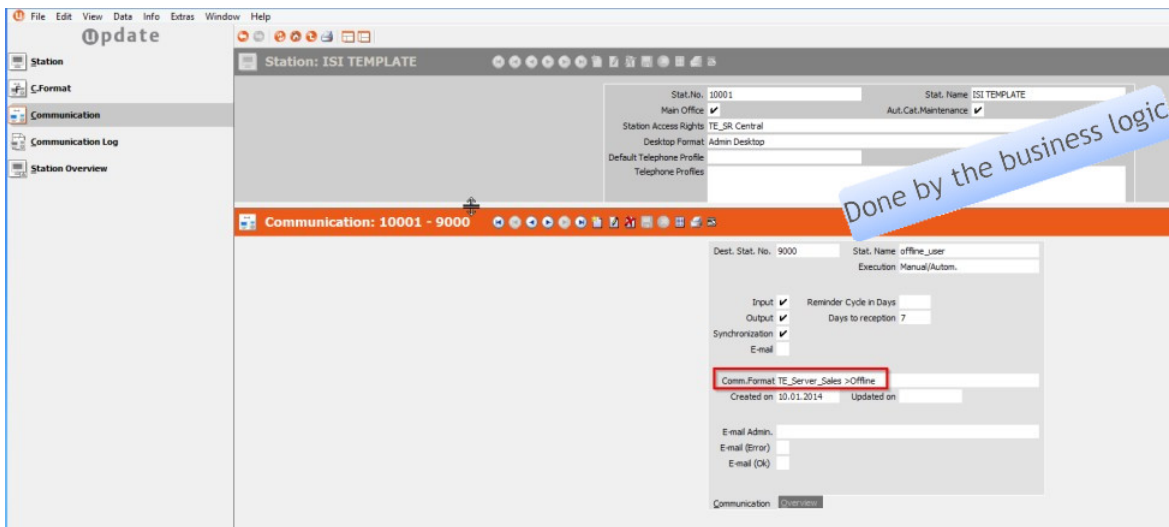

- C:\Program Files\update.CRM\update.CRM web offline BTB\web\web_Example.config
- C:\Program Files\update.CRM\update.CRM web offline BTB\web\system\settings\ users_offline_Example.xml
- C:\Program Files\update.CRM\update.CRM web offline BTB\web\styles\te.base\custom- color_Example.css
- C:\Program Files\updateFiles\update.CRM\update.CRM web offline BTB\web\system\settings\settings_Example.xml

```
<update.configuration>
  <!--OleDbDsn>&designerDsn;</OleDbDsn-->
  <ConfigurationFromDB>>false</ConfigurationFromDB>
  <XmlStoragePath>C:\Program Files\update.CRM\update.CRM web offline
BTB\web\data\offline\configuration</XmlStoragePath>
  <Vertical>&VERTICAL;</Vertical>
</update.configuration>
```

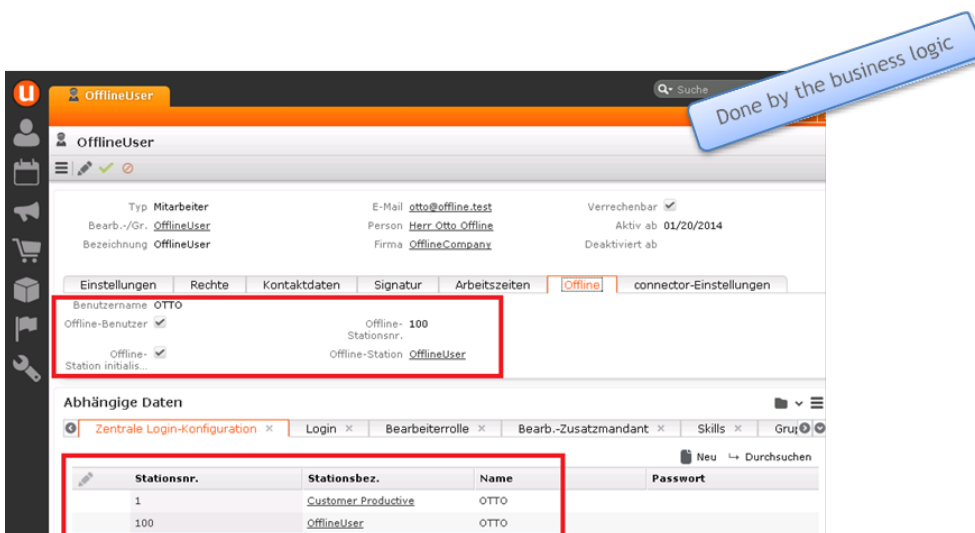

- Start launcher.
- Start Offline Manager and synchronize.

Template LSI Web Offline Installation Server

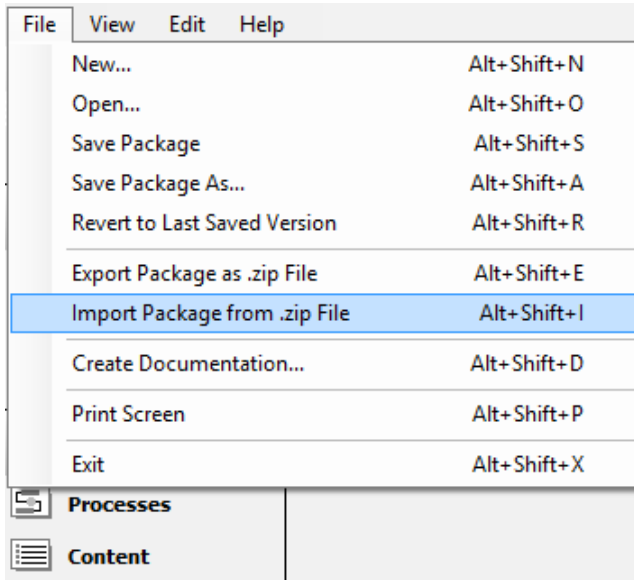

1. Create a new person in the system company
2. Create a new rep (assign pre created person to rep and ensure that the e-mail field is filled)
3. Assign a login role for the rep (e.g. Sales or Service)
4. Check if the rep can log in and that the role is assigned
5. Assign the "offline" role to the rep and set the "offline-user" flag
 - The station is created automatically (consecutively numbered beginning with station number 101)
 - Central login configuration for the actual and the offline station is created
 - Communication for the right stations is created (Server->Offline and Offline->Server)

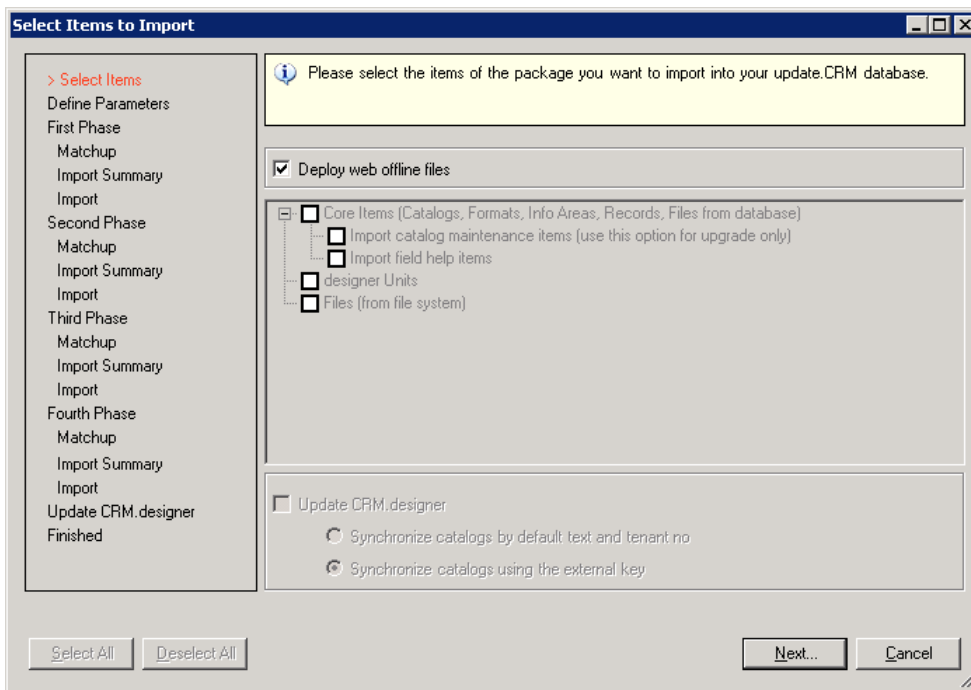

- Several entries to the rep are set (e.g. username, offline-user, offline station initialize,...)

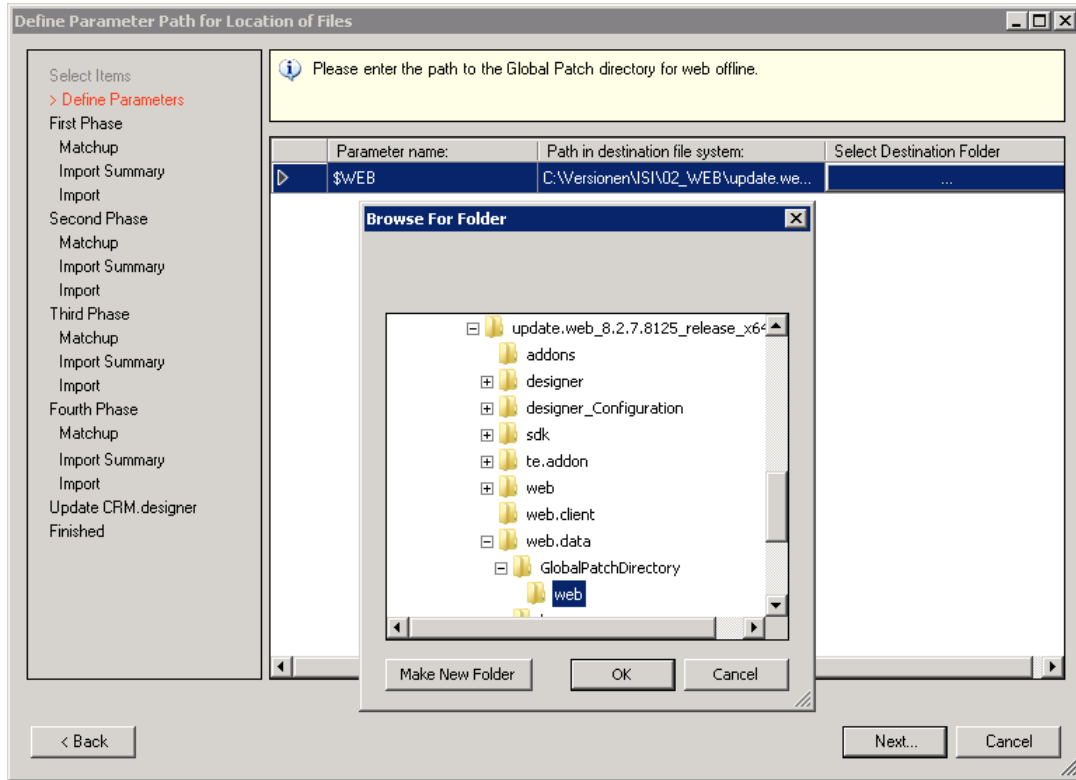

6. Export for the offline station(for example, C:\ProgramFiles\update.CRM\update.CRMwin OTC\system\exe\mmco.exe" -u "SU" -k "out,100,u)
7. A new "GlobalPatchDirectory" directory has to be created in ..\update.CRM\update.CRM web OTC\web.data\.
8. A new "web" directory has to be created in ..\update.CRM\update.CRM web OTC\web.data\ GlobalPatchDirectory\.
9. Start cockpit and click on "Import Package from .zip File" and select the LSI Template package

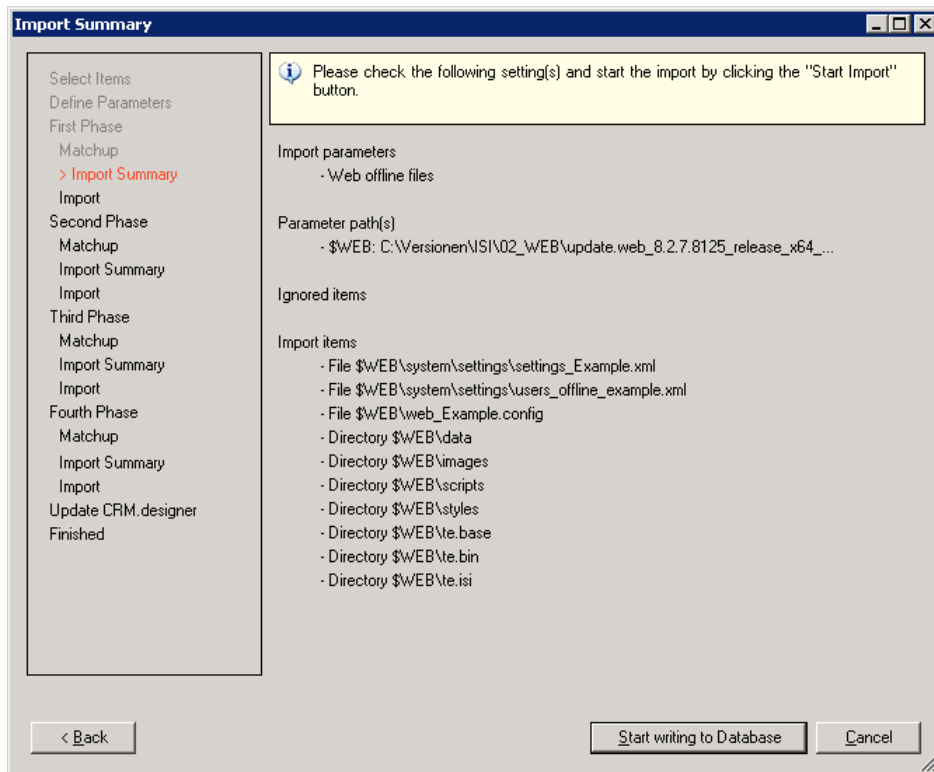

10. Click on the "Deploy web offline files" checkbox

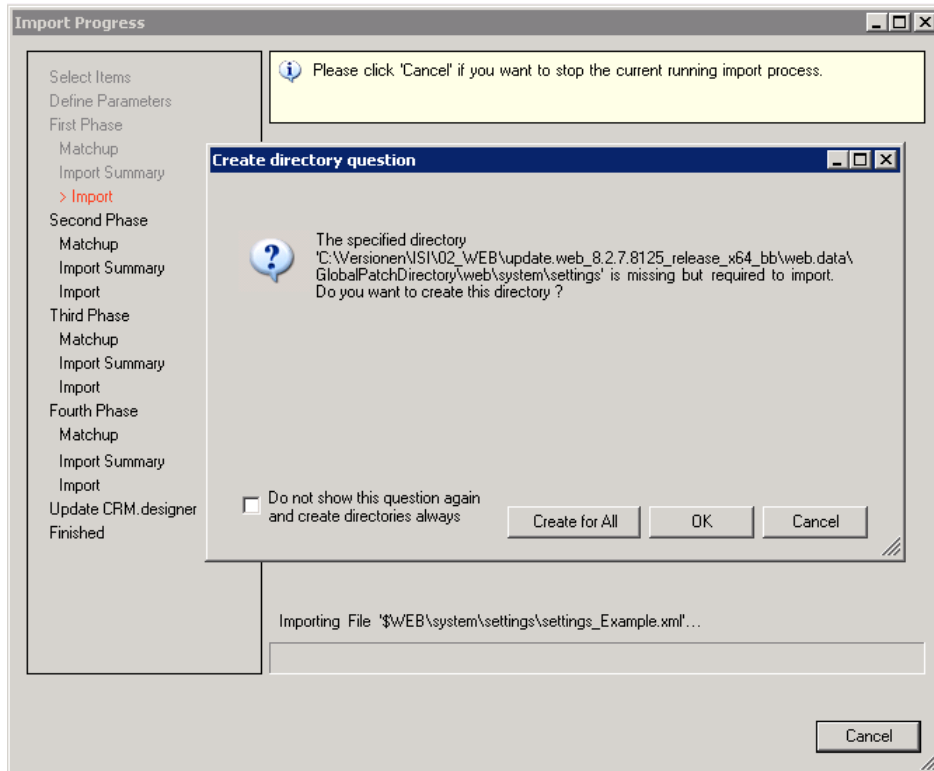

11. Select the newly created web folder in the GlobalPatchDirectory.

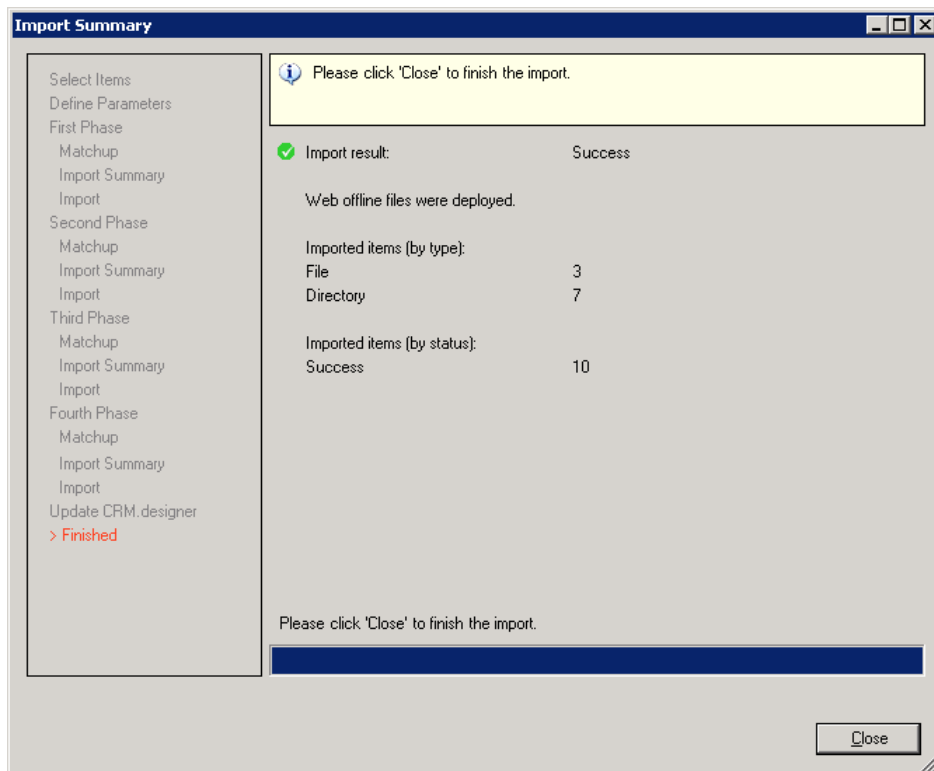

12. Click on the "Start Writing to Database" button

13. When this message pops up you have to click on the “Create for All” button.

14. Import has finished

15. Copy only the global relevant configurations into the “GlobalPatchDirectory” (log in as “SU”, go to “Settings” in “System information”, in the “user” field enter your Offline user and then select the configurations to download them, e.g. “UPDATE_DEFAULT”, “UPDATE_DEFAULT_OFFLINE”, “TE_CORE”, “TE_LSI”,...)

16. Adapt the “offline.xml” on the server (please note that all parameters are mentioned in the Product Installation Guide of Web Offline).

Note: The user must have full access to the DatabasePath (path to the local database file). update recommends specifying a dedicated target directory for InstallDir and DatabasePath (e.g. InstallDir=C:\update.CRM) and defining sufficient access rights for this directory: This ensures that users working with Aurea CRM web offline are able to create and modify files and folders (write/modify rights).

Note: Please ensure that you configure these two web config parameters:

- Offline.RootConfigurationToSync
- Offline.IncludeRootConfigurationInSync

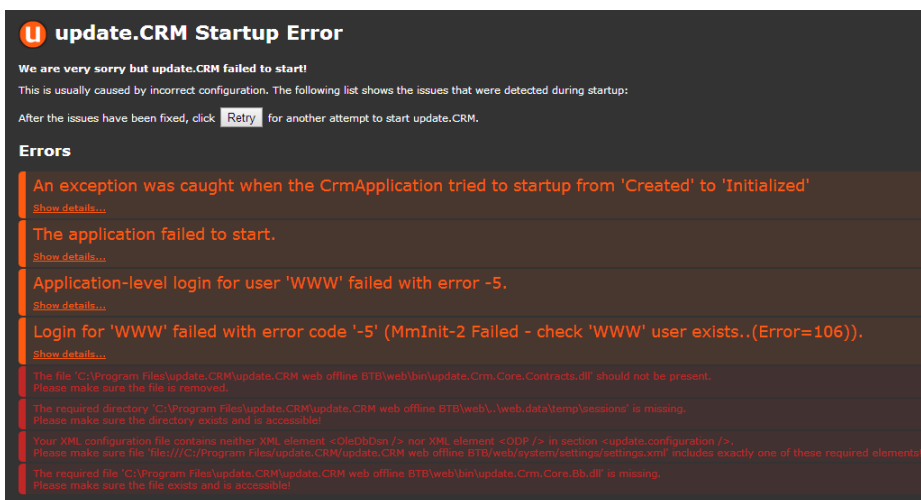

Client

1. Adapt SilentClient.ini. For example:

```
COMUserName=<User>
COMUserPassword=<Password>

[STATIONCONFIGURATION]
StationNumberClient=<100>
StationNumberServer=<1>
ServerURL=<http://mywebserver/updateCRM_web>
ClientURL=http://localhost:7575
```

2. Install web offline (execute setup.exe)
3. Patch web offline and launcher to the actual version (actual web offline and launcher package available on support.update.com)
4. Start the launcher and initialize
 - Afterwards web offline starts with an error message.

5. Please change or adapt the following files

- C:\Program Files\update.CRM\update.CRM web offline OTC \web \web_Example.config
- C:\Program Files\update.CRM\update.CRM web offline OTC \web\system\settings\ users_offline_Example.xml
- C:\Program Files\update.CRM\update.CRM web offline OTC\web\styles\te.base\custom- color_Example.css
- C:\ProgramFiles\update.CRM\update.CRM web offline OTC\web\system\settings\settings_Example.xml

```
<update.configuration>
  <!--OleDbDsn>&designerDsn;</OleDbDsn-->
  <ConfigurationFromDB>>false</ConfigurationFromDB>
  <XmlStoragePath>C:\Program Files\update.CRM\update.CRM web offline
  OTC\web\data\offline\configuration</XmlStoragePath>
  <Vertical>&VERTICAL;</Vertical>
</update.configuration>
```

6. Start launcher.

7. Start Offline Manager and synchronize.

5

Installation Checklist (BS, OP)

Check list for basic installation and upgrades.

Initial Installation

For an initial installation please follow these steps:

#	Product	Description	Comment	Done By
0	WIN	Installation of WIN	Prerequisite	OP
1	WEB	Installation of WEB	Prerequisite	OP
2	WIN	Current station is "Main Office" and "Aut.Cat.Maintenance"	Prerequisite	OP
3	Cockpit	Import template package		OP
4	WIN	Load the "TE_ProcessConfiguration_Global" process configuration in the Rights module		BS
5	WIN	Create new variable values for your station		BS
6	WIN	Configure CU languages	Only LSI/CG	BS
7	WEB	Rename settings_Example.xml to settings.xml		OP
8	WEB	Rename web_Example.config to web.config		OP
9	WEB	Rename custom-color_Example.css to custom-color.css		BS + OP
10	Bulkloader	Update data model, CRM processes, catalogs and roles		OP

#	Product	Description	Comment	Done By
11	Designer	Insert CRM sub-languages		BS
12	Designer	Create Customer configs		BS

Upgrade Installation

For an upgrade installation please follow these steps:

#	Product	Description	Comment	Done By
1	WEB	Turn off IIS application pools and services	Prerequisite	OP
2	WIN	Current station is "Main Office" and "Aut.Cat.Maintenance"	Prerequisite	OP
3	Cockpit	Import template upgrade pPackage with catalog maintenance items		OP
4	WIN	Load "TE_ProcessConfiguration_Global" process configuration in the Rights module		BS
5	WIN	Create new variable values with your station		BS
7	WEB	Rename settings_Example.xml to settings.xml		OP
8	WEB	Rename web_Example.config to web.config		OP
9	WEB	Rename custom-color_Example.css to custom-color.css		OP + BS
10	Bulkloader	Update data model, CRM processes, catalogs and roles		OP
